## Is the 125 GeV scalar the neutrino superpartner?

*Tuesday, 17 September 2013 16:20 (40 minutes)*

The scalar particle recently discovered at the LHC has the same gauge quantum numbers as the neutrino, so that one can ask if they can be one the superpartner of the other. In this talk I will discuss such a possibility, discussing a model where this is realised. This model has an interesting phenomenology at the LHC.
