

Coherent Diffraction and Cherenkov Radiation in fibers

G. Naumenko, A. Potylitsyn, V. Bleko, V Soboleva

Optical fibers

Well known technique for transport of the light

based on the full internal reflection in fiber.

If λ is comparable to d , radiation propagates in several modes.

However, radiation in dielectric fibers may be generated by a Coulomb field of relativistic particles.

This may be useful in beam diagnostics.

Spectra

Figure 5: Photon yields in the HE_{11} mode with $M = +1$ for a small crossing angle : $(v_L, v_T) = (0.95, 0.03)$; $b = 1.5a$.

Here a is fiber radius

Possible geometries of radiation generation in fibers

$$\psi_{DR} > \psi_{FiR}$$

$$\psi_{ChR} > \psi_{FiR}$$

$$\theta < 45^\circ$$

Mainly the DR propagate along the fiber

ψ_{FiR} is the angle of full internal reflection

For Teflon fiber $\psi_{FiR} \approx 45^\circ$

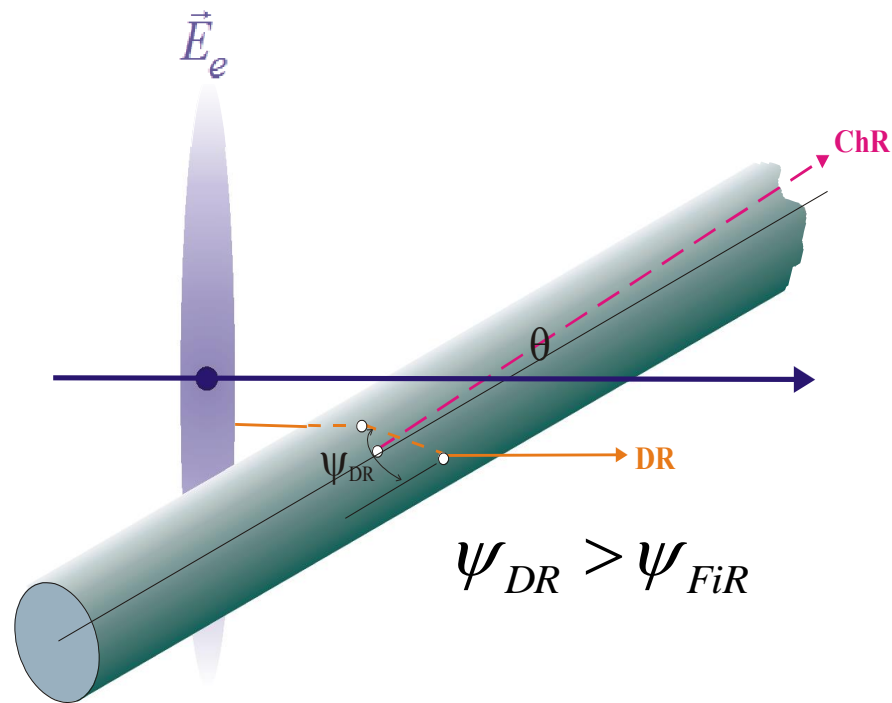

$$\theta \geq 45^\circ$$

$$\psi_{DR} > \psi_{FiR}$$

Mainly the ChR propagate along the fiber

Case of a fiber under the electron beam

Only the ChR propagate along the fiber

Experiment

Spectrum of electron bunch field

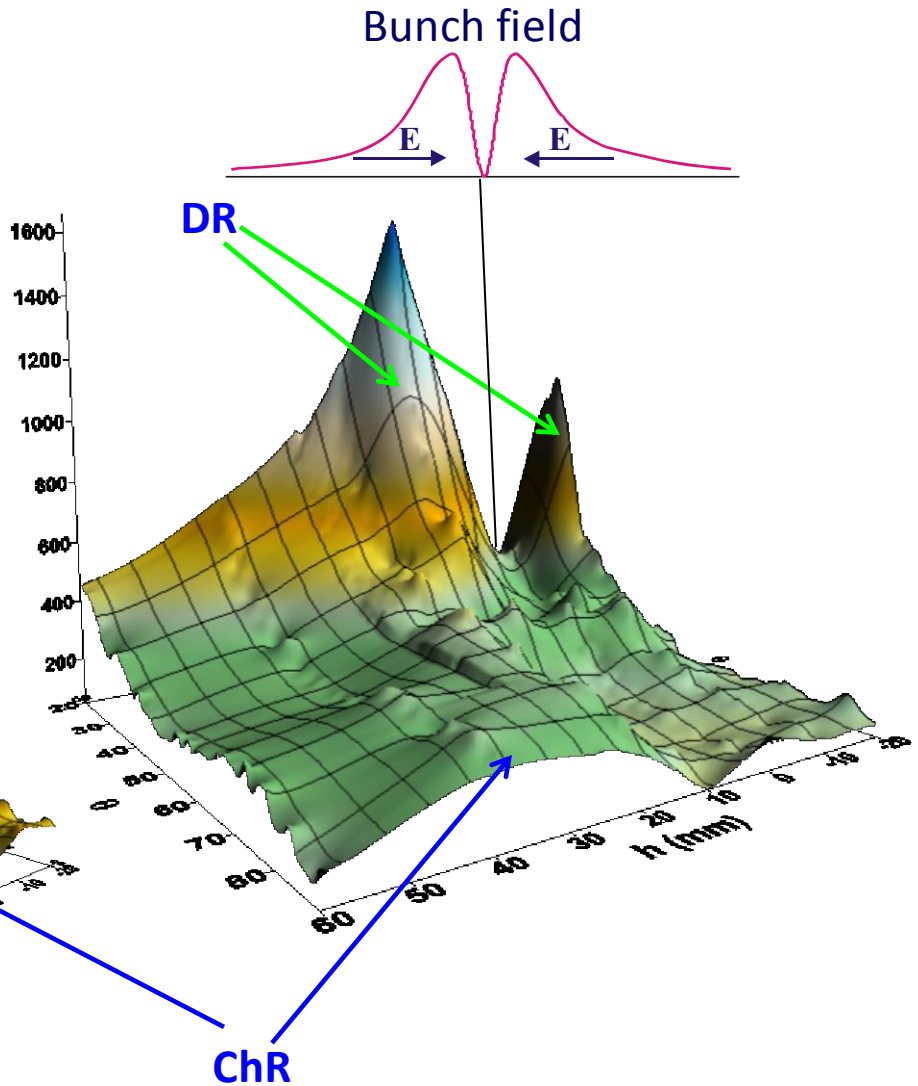

Beam parameters

Electron energy	6.1 MeV	$\gamma = 12$
Macro-pulse duration	2~6 ms	
Pulse repetition rate	1~8 Hz	
Micro-pulse length	≈ 6 mm	
Electrons number per micro-pulse	$\approx 10^8$	
Micro-pulses number per macro-pulse	$\approx 10^4$	
Beam size at the output	4×2 mm ²	
Emittance: horizontal	$3 \cdot 10^{-2}$ mm \times rad	
vertical	$1.5 \cdot 10^{-2}$ mm \times rad	

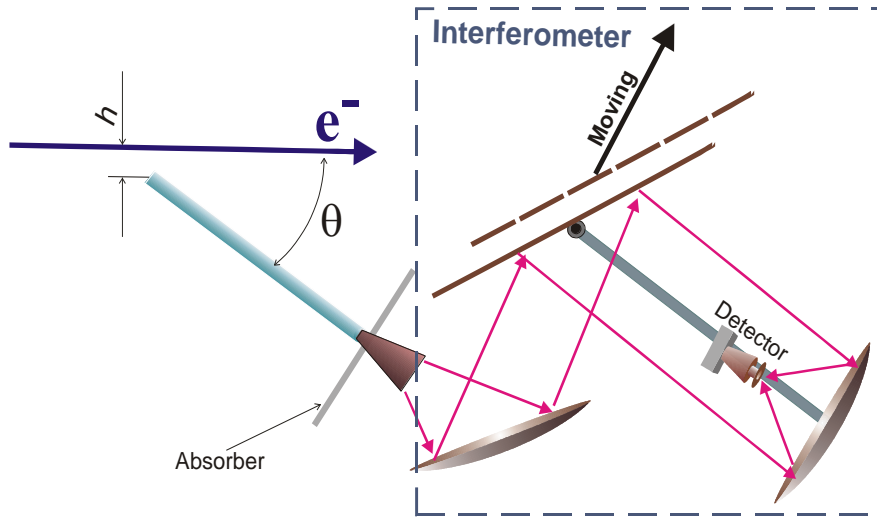

Dependence on the angle θ and impact-parameter h

Scheme *a*

What is cause of the oscillations?

Polarization influence

Angular dependence

Summary

Geometry

Both ChR and DR may be generated and propagate along fibers depending on the angle of fiber in respect to the electron beam.

The dependence on the angle of fiber in respect to the electron beam is unimodal.

Probably only ChR propagates along fibers.

The dependence on the angle of fiber in respect to the electron beam is multimodal.

If $\lambda \approx 2d$, the spectrum of propagated radiation is of several modes.

Thank you for attention
