Transfer Line Linac4 to PSB: Injection Aperture Limitations

## Outline

- Aperture at BIS and DIS
- Aperture in the PSB injection region:
- Review of injected and circulating beam envelope
- Foil
- BSW
- Valves

## Linac4 to PSB: DIS and SMV

- Only "all matched" optics ( $\beta=5 \mathrm{~m}, \mathrm{D}=-1.4 \mathrm{~m}$ ), beam envelope calculated from optics parameters, No tracking!

|  | BI.DIS Hor. | BI.DIS Vert. | BI.SMV Hor. | BI.SMV Vert. |
| :---: | :---: | :---: | :---: | :---: |
| Beam $\boldsymbol{\beta}$ max $[\mathrm{m}]$ | 31.4 | 20.6 | 42.2 | 7.3 |
| normalised $\boldsymbol{\varepsilon}[\pi \mathrm{mm}$ mrad] | $\mathbf{0 . 5}$ | $\mathbf{0 . 5}$ | 0.5 | 0.5 |
| $\boldsymbol{\beta} \boldsymbol{\gamma}$ | 0.6 | 0.6 | 0.6 | 0.6 |
| Betatron envelope $[\mathrm{mm}]$ | 20.3 | 16.4 | 23.5 | 9.8 |
| Beam Disp. $[\mathrm{m}]$ | 0.1 | 1.5 | 0.1 | 1 |
| Max $\Delta \mathrm{p} / \mathbf{p}$ <br> Maximum | 0.0044 | 0.0044 | 0.0044 | 0.0044 |
| mom. Displacement $[\mathrm{mm}]$ | 0.4 | 6.0 | 0.4 | 4 |
| r.m.s. orbit displacement $[\mathbf{m m}]$ | 1.5 | 10 | 1.8 | 1 |
| Mechanical tolerance $[\mathbf{m m}]$ | 1 | 1 | 1 | 1 |
| Max. beam envelope $[\mathbf{m m}]$ | $\pm 23.2$ | $\pm 34$ | $\pm 26.8$ | $\pm 15.9$ |

Aperture OK: 50X100 mm (H x V) for DIS and $\mathbf{7 0 \times 3 2} \mathbf{~ m m}$ for SMV (specifications from A. Lombardi tracking studies for different optics)
W. Weterings

## Foil and Support

Estimated beam size on the foil for zero dispersion (left) and matched ( -1.4 m ) dispersion (right) at injection point. PSB beam envelope ( $\varnothing 54 \mathrm{~mm}$ ) during injection is also shown. (L4-T-EP-0005, EDMS 1108941)

Circulating Beam

## Beam Envelope at the BSW

## Circulating beam size

| Circulating beam beta H nominal | m | 5.6 | Circulating beam beta H nominal | m | 5.6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Max. H beta beat | \% | 25 | Max. H beta beat | \% | 25 |
| Max. H beta function at injection | m | 7.0 | Max. H beta function at injection | m | 7.0 |
| Normalised injected emittance | pi.mm.mrad | 0.5 | Normalised injected emittance | pi.mm. mrad | 0.5 |
| Betagamma |  | 0.61 | Mismatch |  | 1.55 |
| Number of sigma for envelope |  | 4 | Betatron envelope 4sigma | $\pm \mathrm{mm}$ | 14.8 |
| Injection mismatch factor on sigma |  | 1.55 | Circ. Beam Dispersion | m | 1.4 |
| Betatron envelope | $\pm \mathrm{mm}$ | 14.8 |  |  |  |
| Circ. beam \|Dx| | m | 1.6 | $\operatorname{Max} \Delta \mathrm{p} / \mathrm{p}$ |  | 0.0044 |
| Max dp/p |  | 0.004 | Max. momentum displacement | $\pm \mathrm{mm}$ | 6.16 |
| Max momentum displacement | $\pm \mathrm{mm}$ | 6.4 | Mech. Tol. | $\pm \mathrm{mm}$ | 1 |
| Orbit | $\pm \mathrm{mm}$ | 4 | Orbit | $\pm \mathrm{mm}$ | 4 |
| Max H offset for painting | $\pm \mathrm{mm}$ | 2 | Max. H offset for painting | $\pm m m$ | 2 |
| Max. circulating beam envelope at injection start | $\pm \mathrm{mm}$ | 27.2 | Max. circulating beam envelope at injection start | $\pm \mathrm{mm}$ | 28.0 |

## Injected beam size

| Injected beam beta H max | m | 10 |
| :--- | :---: | :---: |
| 98\% normalised H emittance | pi.mm.mra | 3.2 |
| betagamma | d | 0.61 |
| 98\% beam size | $\pm \mathrm{mm}$ | 7.2 |
| Injected beam $\|\mathrm{Dx}\|$ max | m | 1.6 |
| Max dp/p |  | 0.004 |
| Max momentum displacement | $\pm \mathrm{mm}$ | 6.4 |
| Delivery precision H | $\pm \mathrm{mm}$ | 1 |
| Maximum H offset for painting | $\pm \mathrm{mm}$ | 2 |
| Max. injected beam envelope | $\pm \mathrm{mm}$ | $\mathbf{1 6 . 6}$ |

| Injected beam beta H max | m | 10 |
| :--- | :---: | :---: |
| Betatron env. $98 \%$ | $\pm \mathrm{mm}$ | 7.3 |
| Dispersion | m | 1.4 |
| Max. $\Delta \mathrm{p} / \mathrm{p}$ |  | 0.0044 |
| Max. momentum displacement | mm | 6.16 |
| Mech. Tol. | $\pm \mathrm{mm}$ | 1 |
| Delivery precision | $\pm \mathrm{mm}$ | 1 |
| Max. H offset for painting | $\pm \mathrm{mm}$ | 2 |
| Max. Beam env. | $\pm \mathrm{mm}$ | $\mathbf{1 7 . 4}$ |

## Foil and Support

Estimated beam size on the foil for zero dispersion (left) and matched ( -1.4 m ) dispersion (right) at injection point. PSB beam envelope ( $\varnothing 56 \mathrm{~mm}$ ) during injection is also shown. (L4-T-EP-0005, EDMS 1108941)

## Aperture Scheme

## Aperture Scheme

35 mm from KSW for horizontal painting

## Aperture Scheme

35 mm from KSW for horizontal painting 45.9 mm from BSW chicane bump

## Aperture Scheme

35 mm from KSW for horizontal painting 45.9 mm from BSW chicane bump

## Zoom at BSW1

Pipe for injected beam??

## Zoom at BSW4

## Conclusions

- Spec for BIS and DIS as from previous studies
- Injected ( $\pm 17.4 \mathrm{~mm}$ ) and circulating ( $\pm 28 \mathrm{~mm}$ ) beam envelope calculated for -1.4 m dispersion and considering mechanical offset
- Bottlenecks:
- Foil still ok but 1 mm lost on each side of the foil
- BSW1 for circulating beam when painting and chicane on ( 1.7 mm clearance)
- Beam pipe for injected beam
- Separation $\mathrm{H}^{0}$-proton beam: 0.5 mm not enough for dump and diagnostics
