## Valorization of low-grade waste heat

*Thursday 24 October 2013 09:20 (20 minutes)*

Low-grade heat is available everywhere and sometimes in large quantities; consequently, the valorization of this heat seems to be attractive in terms of economics.

We will discuss the issue first from a theoretical point of view; then some examples will be given, namely using waste heat from engines for intake air cooling, the Honigmann process for storing and conversion of low-grade heat, and recent developments of absorption chillers.

**Presenter:** Prof. ZIEGLER, Felix (TU Berlin)

**Session Classification:** Energy Efficiency Examples
