Energy management at DESY: strategy on energy management, efficiency, sustainability

Thursday 24 October 2013 10:00 (20 minutes)

DESY is an internationally renowned centre for the investigation of the structure and function of matter and builds, operates and scientifically exploits brilliant X-ray sources for photon science and detectors and observatories for particle/astroparticle physics. Volatile energy costs, tight operation budgets and increasing environmental concerns require sustainable solutions for instance for energy savings at research facilities and on campus. The current status of the DESY sustainability concept, first implementations and future goals are presented.

Presenter: Prof. DOSCH, Helmut (DESY)

Session Classification: Energy Management at Research Infrastructures (1)
