

# Diffractional W/Z and exclusive dijet production at CDF II

*Tuesday, 8 April 2008 14:00 (20 minutes)*

We report preliminary CDF-II single diffractive W/Z and final exclusive dijet production results from  $\bar{p}p$  collisions at  $\sqrt{s} = 1.96$  TeV at the Fermilab Tevatron. The results are compared with theoretical expectations and the measured exclusive dijet cross sections are used to check models for exclusive Higgs boson production at the Large Hadron Collider.
