

HEPiX Fall 2013 Workshop

Contribution ID: 65

Type: **not specified**

AI monitoring update

Monday 28 October 2013 15:40 (20 minutes)

Summary

We will give an update on monitoring and analytics, in particular the recent progress on mix-and-matching different open source tools (e.g. hadoop, elasticsearch, flume, kibana) for the various architecture layers. We will report on the efforts to build a monitoring and analytics community with participants from different areas: service managers, users, security, management, etc. We will present concrete examples on how this community is using the different tools to improve their daily activities.

Presenter: PALADIN, Massimo (CERN)

Session Classification: Basic IT services

Track Classification: Basic IT Services
