Overview

- News in the organisation
- Central services
- Computing
- Storage
- News from our sites

Organisation news

- Gerd Behrmann on board as full-time developer
 - dCache development, support, etc
 - But also some share in ops and NeIC as a whole
- Jon Kerr Nielsen
 - ARC development
 - ARC release management
- Magnus Jonsson
 - SGAS development
 - Strictly speaking only under NeIC hat, not NDGF
- New slides template :)

Central services

- Currently bladecenter with ~10 blades central services
 - Located in a networking colo facility where the OPN ends up
- To be replaced with 2 fat servers running VMs
 - Namespace DB on bare metal
 - dCache headnodes, nagios, ACIX, etc in VMs
 - Currently waiting for power in the colo facility

Computing

- Fewer and fewer dedicated systems
- Majority of WLCG pledge delivered as shares of larger HPC systems
 - Typical linux clusters with infiniband, the kind you expect to turn up at around #100-#200 on top500 when installed
 - 10k core Abel and 15k core Abisko do ATLAS computing
 - WLCG is a large user, but not necessarily the largest
 - CVMFS and compatibility libraries installed on nodes
 - Note that WLCG can't tell these what OS to run
 - “SL5 -> SL6 migration” is met by “well, we'll decommission the old cluster next year, the new one will run newer OS”
