

HEPiX Fall 2013 Workshop

Contribution ID: 44

Type: **Oral presentation**

Puppet at USCMS-T1 and FermiLab

Wednesday, October 30, 2013 4:25 PM (25 minutes)

Over the past year, the USCMS-T1 project has decided to jump head-first into Puppet as our primary configuration management tool. We would like to talk about what's worked, what hasn't worked, and how we've been able to work with the other Fermilab teams to share our experiences without necessarily sharing a code base.

Summary

This will be a fairly informal presentation explaining why we chose puppet, what's happened with puppet in the near past, how we're collaborating with the other Fermi teams that use puppet, and the benefits of having a central puppet-users@fnal.gov list has been helpful for everyone involved.
