Automatic server registration and burn-in framework

Monday, October 28, 2013 4:25 PM (25 minutes)

This talk provides an overview of CERN IT's automatic server registration and burn-in framework. It will mainly focus on the reasons behind the development of such framework, and the implementation details. A detailed walkthrough of the process stages will be presented, along with the first results of the acceptance of about 1,500 servers. Finally, the talk will underline the benefits of the server registration and certification process automation.
