

HEPiX Fall 2013 Workshop

Contribution ID: 11

Type: **Oral presentation**

CERN Cloud Status

Friday, 1 November 2013 09:00 (25 minutes)

This talk will provide an update on the CERN private infrastructure-as-a-service cloud which is now in production based on OpenStack

Grizzly. Along with the current status, we will give plans for the next developments and evolution of the service in areas such as

block storage using ceph and Netapp, Kerberos and X.509 support and scaling to multiple cells across CERN's two data centres.

Primary authors: OULEVEY, Thomas (CERN); BELL, Tim (CERN)

Presenter: OULEVEY, Thomas (CERN)

Session Classification: Grids, clouds, virtualisation

Track Classification: Grid, Cloud & Virtualisation
