Identity Management in Future Scientific Collaborations

Wednesday 30 October 2013 10:00 (30 minutes)

Scientific collaborations are evolving to a model where large, multi-dimensional data sets are analyzed in whole or in part by relatively small groups of researchers. These groups are often without the expertise and/or resources to develop and maintain a sophisticated IT infrastructure and represent the growing “long tail of science”. The presentation will discuss the evolving structures and new approaches, policies, and services needed to lower the barriers to providing Identity Management to future collaborations.

Author: COWLES, Bob (Indiana University / CACR)

Co-authors: JACKSON, Craig (Indiana University / CACR); WELCH, Von (Indiana University / CACR)

Presenter: COWLES, Bob (Indiana University / CACR)

Session Classification: Security and networking

Track Classification: Security & Networking
