Logstash and ElasticSearch deployment scenario at GSI

Wednesday, October 30, 2013 2:30 PM (30 minutes)

This talk will present some use cases for Logstash and ElasticSearch. In particular we will show how we are using these tools to collect, parse, index and analyze logs of different services: Grid Engine, SSH, Apache and Cisco Firewalls, among the others. Moreover, the introduction of the version three of Kibana, as an HTML plus Javascript interface, has improved the analytics capabilities of ElasticSearch.
