The migration from ELFms/Quattor to Agile Infrastructure

Wednesday, 30 October 2013 15:00 (30 minutes)

The life cycle of the ELFSms (extremely large fabric management system) is reaching its end. This set of tools provided to manage machines in the CERN Computer Centre has reached the end-of-life and a new Configuration Management System is going to take its place.

The new Configuration Management System is going to change drastically the way we manage machines in the CERN Computer Centre and a migration is necessary to be implemented. To ensure a smooth migration the CERN Configuration Management System Team has been doing several activities to anticipate the switch off of the ELFSms.

In this talk we will introduce the new Configuration Management System and its principal components. We will compare it with ELFSms/Quattor system and provide inner details how the migration from ELFSms/Quattor is being implemented. The details will include of what have been done so far and what are the plans for the future.
