Hadronic physics validation tool, Status and Plans

Hans Wenzel, Andrea Dotti, Julia Yarba Sep 23rd 2013

Introduction

Central repository (Database) of tests, where a test is a comparison of experimental data with simulation. Test are stored as plots with metadata in the data base. The web application allows to View the tests. Providing/uploading the test results is responsibility of the model developers. Sep. 23rd, 2013 Geant4 Collaboration Meeting

Web page:

http://g4validation.fnal.gov:8080/G4ValidationWebApp/

Code in SVN https://svnweb.cern.ch/cern/wsvn/g4validation/trunk/G4ValidationWebAp p/

Validation Taskforce TWIKI/Task list:

https://twiki.cern.ch/twiki/bin/view/Geant4/PhysicsValidationTaskForce

https://twiki.cern.ch/twiki/bin/view/Geant4/ValidationTasks

https://svnweb.cern.ch/trac/g4validation/

Production environment

 web Application server on VM on Fermi Cloud, postgresql database operated by fermilab database group.

http://g4validation.fnal.gov:8080/G4ValidationWebApp/

- Up to date: latest java/java libraries, glassfish web application server, database schema identical to development environment.
- New features include:
 - Multiple (single) File Upload web application. Help available to guide you through the process.
 - Release highlights for upcoming Geant4 release (Julia)
 - Only tests explicitly declared public can be viewed without authentication.
 - Expert login to view, edit, delete tests. (Makes use of functionality provided by glassfish web application server).

Example: Uploading multiple tests (cont.)

This is what a successful upload should look like. Problems usually arise from malformed xml files which can be avoided by:

- Use of xml enabled editor
- Templates for different tests (usually only geant 4 version changes for a given test)

🜪 🎐 🖻 🔂 🧏 🜆 🝿 🗃 🎄 🧊 🔲 🔀 triathlon.fnal.gov:8080/G4ValidationWebApp/Servlets/XMLUploadServlet

Development/Test environment

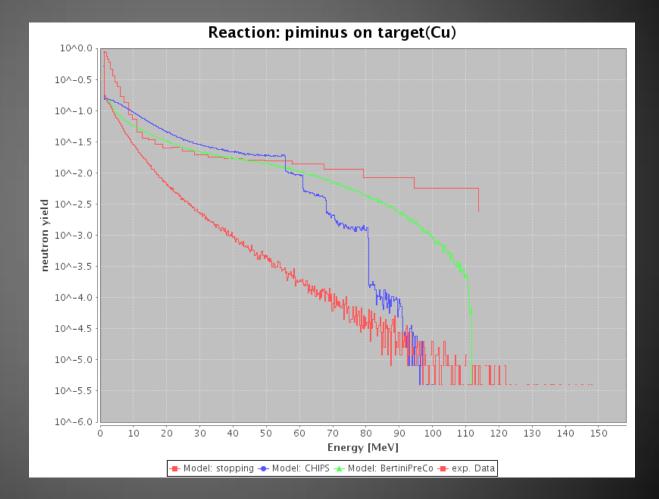

- Development web Application server on Fermi Cloud/ development data base, used to test features/configurations then will be rolled over to production server. http://g4devel.fnal.gov:8080/G4ValidationWebApp/
- Also hosts prototype 'plots on the fly' web application:<u>http://g4devel.fnal.gov:8080/JFreeWebApp</u>

Graphs on the fly prototype

- Data base schema extended to store raw experimental and raw simulation data (histograms) in the data base.
- Select → plot and overlay (comparable) data, using the jfreechart graphics package.
- Example test48 data provided by Julia:
 - Reaction: pi on Target (Cu, Al, O, N, C, Pb, Ta)
 - Observable: neutron yield
 - Geant 4 version: (need to look up)
 - Models: stopping, Chips, Bertini PreCo
 - Experimental data: Madey et al.

Graphs on the fly example created by prototype web application

What's next

- Work and extend the existing task list.
- Develop prototype web application that allows to select experimental and simulation data and then overlays the data in a plot.
- Import all the experimental data files used by various tests.
- Evaluate web frameworks like PrimeFaces to provide scalability and modern look and feel.
- Actually it is a fun project for e.g. computer science students to learn about web application frameworks, javaEE etc.
