

## Status of 3D Detector R&D in Freiburg

*Wednesday, 4 June 2008 10:30 (20 minutes)*

We will report on the status of the test performed with 3D strip detectors that were fabricated at FBK-irst. Modules made by joining 3D detectors of several designs and ATLAS SCT read-out electronics exist, and were tested both before and after irradiation. Results from the 2007 3D test beam at CERN will also be shown.
