## Quarkonia and quarkonia-like spectroscopy at LHCb

*Thursday, 1 May 2014 09:20 (20 minutes)*

The latest years have seen a resurrection of interest in searches for exotic states motivated by tantalising observations by Belle and CDF. Using the data collected at pp collisions at 7 and 8 TeV by the LHCb experiment we present studies of the  $X(3872)$  properties including its decay rate to  $\Psi(2S)\gamma$ , as well as studies of putative states such as the  $Z(4430)^+$ .
