## **Latest results on inclusive W/Z production at CMS**

*Wednesday, April 30, 2014 9:20 AM (25 minutes)*

At the LHC, inclusive production of W and Z bosons offer a unique window to perform stringent tests of theoretical predictions based on the Standard Model (SM) and probe its fundamental parameters. With the large samples of W and Z events collected with the CMS detector, many processes have been studied at an unprecedented precision. These measurements test the SM predictions up to next-to-next-to-leading order and provide valuable inputs to improve the theoretical framework used to model LHC physics. In this talk, recent CMS results on inclusive W/Z production are reviewed.
