The NA62 experiment at CERN

Tuesday, 29 April 2014 17:30 (20 minutes)

The NA62 Experiment at CERN aims to collect about 100 $K \rightarrow \pi \nu \bar{\nu}$ events in two years of data, keeping the background below 20%. The general physics program of the experiment and the prospects of the $\pi \nu \bar{\nu}$ analysis in view of the first run scheduled for end 2014 will be reviewed.
