Charmed Spectroscopy at LHCb

Thursday 1 May 2014 11:00 (20 minutes)

The 7 and 8 TeV pp collision data collected by the LHCb experiment during 2011 and 2012 provide a rich sample of heavy flavour production and decays in which to study hadron properties. We present a summary of the recent experimental results from LHCb including studies of D_J mesons decaying to $D^{(*)}\pi$. We also report a search for the doubly charmed baryon Ξ_{cc}^+
