Azimuthal decorrelations in forward central dijets production at LHC within high energy factorization

Thursday, 1 May 2014 10:00 (20 minutes)

The results for azimuthal decorrelations in production of forward and central jets in collision $p+p$ and $p+Pb$ are going to be presented. The considered cross section is obtained within framework of high energy factorization and makes use of gluon density obtained from BK equation extended to account for corrections of higher order.
