Digitized press and Elasticsearch in RERO DOC

Tuesday 19 November 2013 16:35 (25 minutes)

Elasticsearch is a recent powerful search engine similar to SOLR but with a RESTful API. We will show how we use this tool in our Invenio instance: RERO DOC. We use it not only as a simple full-text search engine but also for faceting, filtering, highlighting the results, digitized press navigation and even log analysis.

Presenter: MARIÉTHOZ, Johnny (R)

Session Classification: INVENIO FOR HOSTING SPECIAL REPOSITORIES
