# (Remote) AMOD report 8-12 July

Peter Love
Lancaster University

Issues - auto setup script

- Deployment of auto-setup scripts caused pilot failure

- the plot below shows number of wrappers running/exiting, pilot was exiting immediately

- rolled back quickly

- workaround deployed in both setup and wrapper scripts

Notes

- BNL file recovery ongoing (see <u>today's news</u>)

- US cloud hit transfer timeout with large number of jobs failed. Caused by loaded Site Services and workaround by increasing transfer timeout. BNL-DATADISK now handled by separate site service machine.

- FTS3 now used by 4 UK sites (ECDF, LANCS, MAN, RALPP)

  - no problems

  - also WEIZMANN-LCG2 and tomorrow IL-TAU-HEP and TECHNION-HEP

Notes

- an interuption to monitoring was noticed Friday

- hasn't been investigated but noted here for completeness

- possibly a pandaserver intervention?

CERN-P1 OpenStack scaling better now
