X-ray observations of gamma-ray pulsars detected by Fermi

Thursday 27 March 2014 15:10 (20 minutes)

In this talk, we present the outcome of X-ray and optical/IR observations of gamma-ray pulsars detected by Fermi, as a part of a program aimed at completing the multi-wavelength coverage of these sources. We found X-ray counterparts for five Fermi pulsars, and we observed in X-ray some unidentified Fermi sources believed to be isolatd neutron stars.
