Exotic Hadrons and Large N_c QCD

Tuesday 4 February 2014 11:00 (30 minutes)

Exotic hadrons are those which cannot be described in a naive quark model. This talk discusses possible insights the large N_c limit of QCD can give us about exotics. The focus will be on tetraquark states. One key feature of the analysis is the fact there is more than one way to extrapolate to the large N_c limit.
