

Some Points

- risk
 - let's try it for 2 years and see – risk is small
 - get forums synched to optimize agendas
- who
 - establish a form of independence from eInfra providers
 - i.e. get user community representatives in the driving seat
 - natural approach: ask ESFRI communities and similar
 - will we get the right people – a challenge and risk
 - some have several roles (CSC, CERN, etc)

Some Points

- what
 - cross-eInfra challenges – which are they?
 - helping on indicating, evaluating, motivating services
 - discussing relevant technologies?
 - cross-community interaction on services and help
 - forum as brokerage body, sharing knowledge
 - business models discussion
 - monolithic – layers?
 - etc.
- but
 - linkup with existing forum initiatives (RDA, ESFRI, e-IRG, etc.)
 - don't hurt well running forums
 - don't bring communities into a competitive game
