AFS-OSD current state and future

Wednesday 26 March 2014 18:00 (30 minutes)

AFS-OSD is currently used at two sites with totally more than 1 PByte of data. Some fileservers are still openafs 1.4 based, others already 1.6 based. The 1.6-based source is kept in github. For the integration into openafs 1.9 a stripped version is being prepared for openafs's git master which is compatible to the 1.6 version in github, but not to the old 1.4 based clients and servers.
