Updates and Experiences from the Genome Center's Data Center Construction Project

Tuesday 6 May 2008 14:00 (30 minutes)

Over the last couple of years, The Genome Center at Washington University in St. Louis has been involved with the planning and construction of a new data center. We will provide updates since our data center presentation at HEPiX Fall 2007 in St. Louis. In addition, we will share our experiences and lessons learned as we prepare to move into the new data center in May 2008.

Author: STIEHR, Gary (The Genome Center at Washington University)

Presenter: STIEHR, Gary (The Genome Center at Washington University)

Session Classification: Data centre management, availability and reliability

Track Classification: Data centre management, availability, and reliability
