

CLIC-ILC BDS & MDI work

Materials for discussion

Daniel Schulte, Rogelio Tomas and Emmanuel Tsesmelis
for CLIC team

Andrei Seryi
for ILC BDS team

February 8, 2008

Global Design Effort

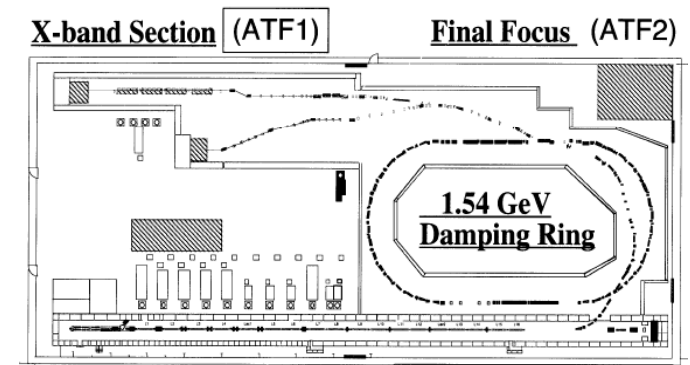

Strategy

- Looking forward to work with CERN and CLIC colleagues
- Consider this as a natural continuation of long and fruitful collaboration
- Expect that challenging scientific tasks will benefit ILC and CLIC research, and both short and long term program of involved institutions
- Expect that ideas and solution would have broad applicability and we will be proactive in search of such opportunities

Fruitful history => future

- ATF2, a prototype of advanced final focus for linear collider, was conceived at Nanobeam 2002, organized by CERN
- Idea evolved, and now being realized in iron and concrete
- Now looking forward to work with CERN colleagues on experiments at this facility

Early scheme presented by Junji

L. Maiani

R. Assmann, F. Zimmermann

J. Urakawa

ATF2 construction – January 2008

The last regular quadrupole is going to the destination

- Consumable collimators developed for NLC
- Concept applied for LHC phase II collimation

- Will be studied for CLIC

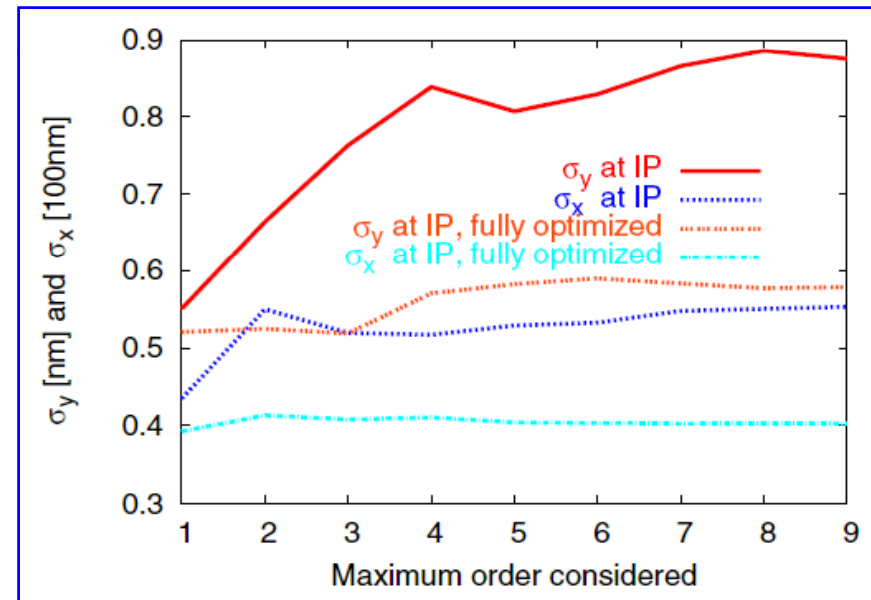

Optics optimization

- Tools developed for optimization of beam delivery will be mutually used for further improvement of the designs

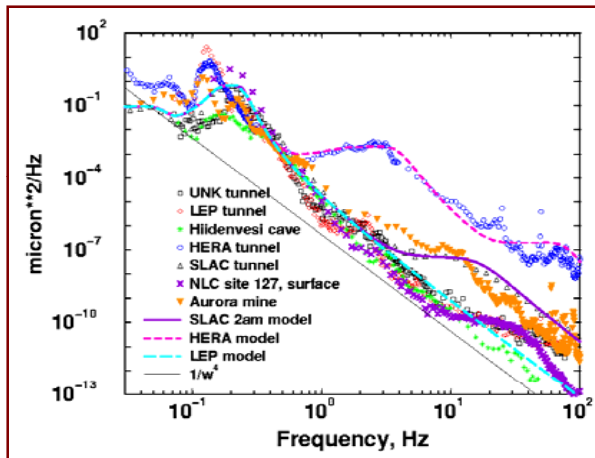

ILC BDS optimization

R.Tomas, CLIC BDS optimization

ILC Stability

- Long history & potential for future joint developments

IR integration (or MDI)

- Variety of common interest tasks
- Focus of joint activity

IR integration, SiD example

SC final double & its stability study

Push-Pull studies for two detectors

Alain Herve, CERN, et al

Detailed lists of tasks

- In preparation for CLIC-ILC meeting on February 8, a phone meeting was held on January 28. Participants: Andrei Seryi, representing GDE BDS & MDI, and Daniel Schulte, Rogelio Tomas, Emmanuel Tsesmelis and Andrea Latina (CLIC) , representing CLIC BDS&MDI efforts
- Second preparatory phone meeting, Feb 5. Participants: Daniel Schulte, Rogelio Tomas, Emmanuel Tsesmelis and Andrea Latina for CLIC, and Andrei Seryi, Brett Parker, Tom Markiewicz and Deepa Angal-Kalinin for GDE BDS & MDI
- Lists being developed (see next pages)
- Next milestones
 - **Identify contact persons for different tasks**
 - **Identify solutions for LHC that can be applied to ILC and CLIC**
 - **Identify solutions for ILC that can be applied to CLIC**

Detailed lists being developed...

- Optics design and optimization
 - Collimation system
 - Final focus system
 - Extraction line
 - Design concepts
- Optimisation tools
- Tracking tools
- Collimators
 - Survival
 - Wakefields
- ATF2
 - Tuning procedures
 - Flight simulator
- Energy spectrometer
- Polarimeter
- Beam dump
- Crab cavity
 - Design
 - Phase stability
- Beam instrumentation
 - BPMs
 - Laser wires
 - Extraction line instrumentation
- Feedback design
- Beam-based alignment and tuning procedures
- Survey
- Stabilisation
- Magnets and power supplies
- Final doublet design
- Intra-pulse IP feedback
- BPM for intra-pulse feedback
- Integration of corrector kicker
- Feedback design

Detailed lists being developed...

- Background studies
 - Common simulation tools
 - BDSIM
 - Integration into GEANT?
 - FLUKA
 - Halo and tail generation
 - Common formats etc
 - Study of machine induced background
 - In particular, neutrons, muons and synchrotron radiation
 - Mitigation strategies
 - e.g. tunnel fillers against muons
 - Study of beam-beam background and luminosity spectrum
 - Support and stabilization
 - Low-noise design
 - Noise level measurements
 - Among others, measurements at LHC
 - Component design
- Mechanical design of quadrupole support
- Stabilization feedback design
- Sensors
 - Actuators
- Inner/forward detector design
 - General layout and integration
 - Masking system
 - Constraints on vertex detector
 - Common tools for detector studies
- Low angle calorimeter
- Beam pipe design
 - Vacuum etc.
- Crossing angle
 - Try to find a common crossing angle
- Experimental area integration (to be done with other groups)
 - Infra-structure
 - Push-pull
