

Open Source & open hardware solutions for applications in HEP and Industry

Grzegorz Kasprowicz

Warsaw University of Technology & Creotech Instruments SA

Creotech Instruments SA is producer and integrator of complex, custom measurement and control systems for industry, science and (recently) space applications. We believe that Open Hardware is great opportunity for industry and science, especially in applications that require long-term support and non-typical solutions. Our business model in high-tech segment is based on open hardware and open software approach since it lowers the development cost and gives direct access to the scientific community.

OHWR site is also great place to advertise the company activity and new products.
