Degeneration of algebraic varieties and K-theory

Saturday, 24 May 2014 14:45 (45 minutes)

The talk is based on our joint works with Kontsevich, Schwarz, and Walcher.

Let X be a smooth proper algebraic variety over the formal punctured disk, maximally degenerated at the origin. Generalizing Mumford's construction in the case of abelian varieties I will attach to X a certain mixed Tate motive over the punctured disk and explain some application of this construction to the Mirror Symmetry.
