JSON data structures in modern web applications

Tuesday, 15 April 2014 15:20 (1 hour)

Web and mobile applications are growing in today's digital world. Ten years ago XML was the primary data interchange format but it's no secret that in the last few years JSON has become more and more popular among web and mobile developers. This talk will introduce JSON in a basic way comparing it with XML and will show some use cases where JSON is commonly used in today's software development.
