How Raspberry Pi can ease your life

Wednesday 16 April 2014 09:00 (1 hour)

Raspberry Pi, a 30€ credit-card-sized microcomputer, was originally created to encourage kids to learn how to program. This is no longer the only use case of this board as it has become very popular in the DIY world. In this talk we will describe the board it self and several projects, both software and hardware, which could be done with it.
