Eighth CW and High Average Power RF Workshop

Contribution ID: 32

Type: Poster

Prototyping of superconducting cavities for RAON the heavy ion accelerator

Thursday, 15 May 2014 15:35 (1 minute)

Four kinds of superconducting resonators (Quarter wave resonator, half wave resonator, and Single spoke resonator type 1, type 2) are designed and developed for the heavy ion accelerator the RAON. Resonators which have extreme high Q-factor $10E9 \ 10E10$, are filled up through coaxial RF power couplers of over coupling at 81.25MHz (QWR), 162.5MHz (HWR), 325MHz (SSR) respectively. Cavities are fabricated from 3mm RRR300 Niobium sheets by the collaboration with domestic vendors. 325MHz 10kWatts RF power couplers are prototyped and will be tested with a dummy cavity in the room temperature.

Primary author: Dr JUNG, Hoechun (Institute for Basic science)

Co-authors: Dr JEON, Dong O (Institute for Basic science); Dr PARK, Gunntae (Institute for Basic science); DO, Heejin (I); Dr CHA, Hyukjin (Institute for Basic science); Dr KIM, Hyung Jin (Institute for Basic science); Dr SHIN, Ilkyuong (Institute for Basic science); Mr JOO, Jong Dae (Institute for Basic science); Mr HYUN, Myung Ook (Institute for Basic science); Mr JUNG, Yoo Chul (Institute for Basic science)

Presenter: Dr JUNG, Hoechun (Institute for Basic science)

Session Classification: Poster session

Track Classification: SPC judgements
