## Are there sterile neutrinos at the eV scale?

*Friday, June 27, 2014 2:30 PM (20 minutes)*

I will discuss the status of several hints for sterile neutrinos at the eV scale. While those hints point towards a similar neutrino mass scale various constraints on the mixing angles make it difficult to obtain a good description of all data simultaneously. I will review the situation from oscillation experiments and mention briefly additional constraints from cosmology.
