Decaying dark matter in X-rays?

Wednesday, June 25, 2014 3:40 PM (20 minutes)

Recently two groups have reported an unidentified line-like feature in the X-ray spectra of dark matter-dominated objects (galaxies and galaxy clusters) Bulbul et al. and Boyarsky et al.. We discuss the signal and consistency of its interpretation in terms of dark matter decay.

Session Classification: Dark Matter: Indirect Detection

Track Classification: Dark Matter Indirect Detection
