

Cosmic Reconstruction: methods and configurations

ALICE Offline Week

Timeline

Phase1. AliRoot/xrootd fixes

- Grid jobs failing during remote file access, AliRoot hangs while accessing OCDB and RAW data files (TXNetFile). Same effect from aliensh when trying to download the files
- First xrootd/Castor fix: only few "bigger" (12-35MB) OCDB files were not accessible, i.e.
 - ITS/Calib/MapsAnodeSDD
 - ITS/Calib/MapsTimeSDD
 - TPC/Calib/ExB
- Larger xrootd cache parameters ("XNet.ReadCacheSize" and "XNet.ReadAheadSize"). Manual set in rec.C: the copy of the corrected AliRoot .rootrc steered by the AliEn shell script fails because replaced by the Root default one
- Several AliRoot fixes for TPC, ITS SSD/SDD, T0, V0, HMPID (see Cvetan's talk Offline weekly 28/02)

rec.C with lots of detector-specific settings: all the needed options should be put in the corresponding detector's RecoParam classes and stored in OCDB

```
itsRecoParam->SetClusterErrorsParam(2);
itsRecoParam->SetFindV0s(kFALSE);
itsRecoParam->SetAddVirtualClustersInDeadZone(kFALSE);
itsRecoParam->SetUseAmplitudeInfo(kFALSE);
itsRecoParam->SetLayerToSkip(##);

tpcRecoParam->SetTimeInterval(60,940);
AliTPCReconstructor::SetStreamLevel(1);

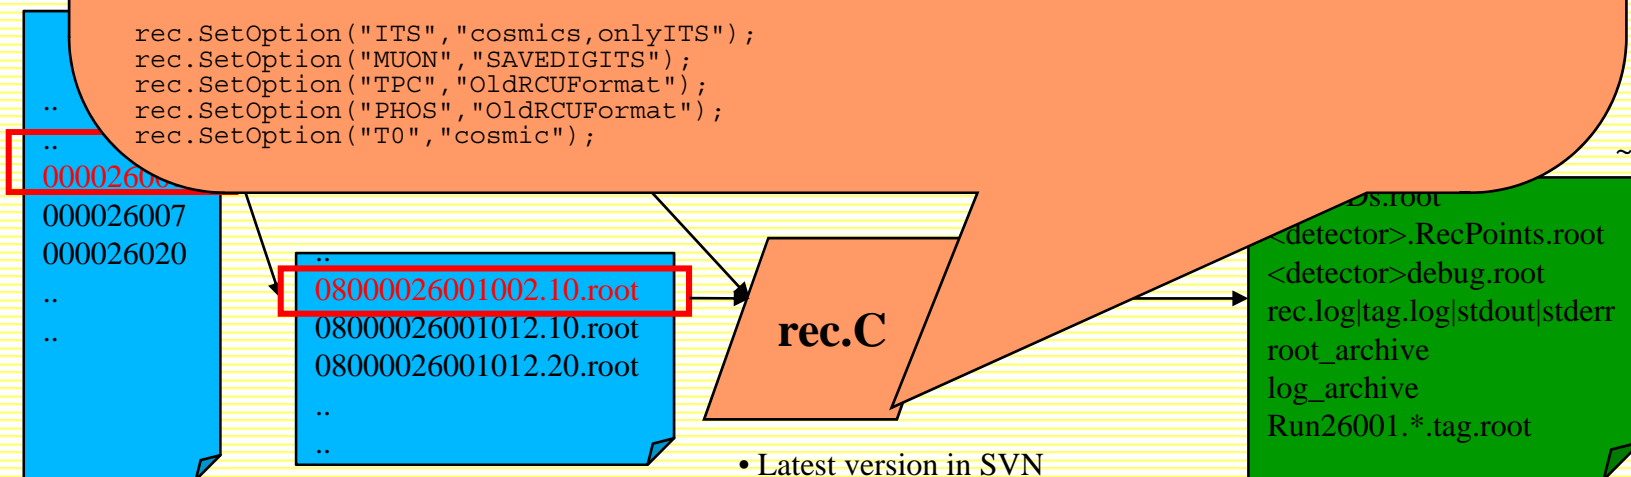

AliTRDrawStreamBase::SetRawStreamVersion("TB");

AliPHOSRecoParam* recEmc = new AliPHOSRecoParamEmc();
recEmc->SetSubtractPedestals(kTRUE);
recEmc->SetMinE(0.05);
recEmc->SetClusteringThreshold(0.10);

muonRecoParam->CombineClusterTrackReco(kTRUE);
muonRecoParam->SetCalibrationMode("NOGAIN");

AliMagFMaps* field = new AliMagFMaps("Maps","Maps", 2, 0., 10., 2);
AliTracker::SetFieldMap(field,1);
AliExternalTrackParam::SetMostProbablePt(0.35);

rec.SetOption("ITS","cosmics,onlyITS");
rec.SetOption("MUON","SAVEDIGITS");
rec.SetOption("TPC","OldRCUFormat");
rec.SetOption("PHOS","OldRCUFormat");
rec.SetOption("T0","cosmic");
```

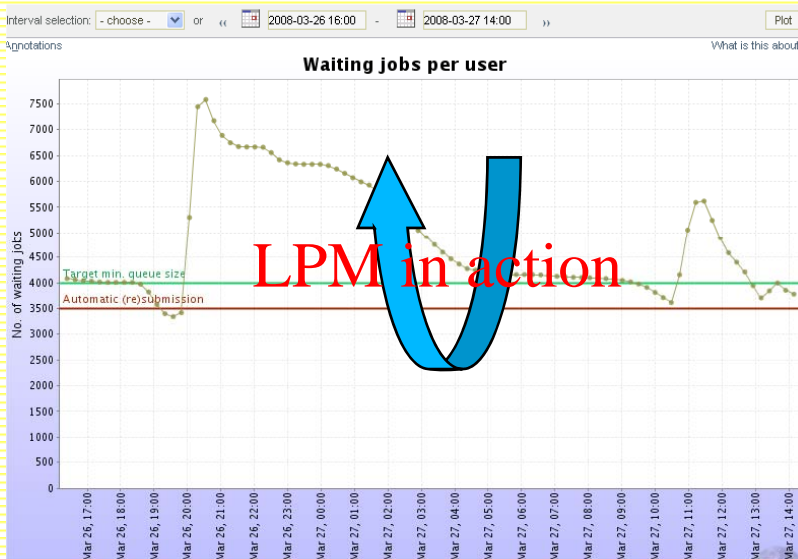

- Latest version in SVN
- \$ALICE_ROOT/test/cosmic

Errors Status

1. **Jobs EXPIRED**: jobs successfully go to SAVING but fail to write produced files to CASTOR2.
2. **Jobs ERROR_E**: "*zero CPU consumption in the last 20 mins*". The first time some raw file is accessed, it takes longer to be staged. Solved using automatic job re-submission (see later).
3. **Jobs ERROR_V**: AliRoot fixes from v4-11-Rev-01 to v4-11-Rev-03

Phase 3. Automatic Production

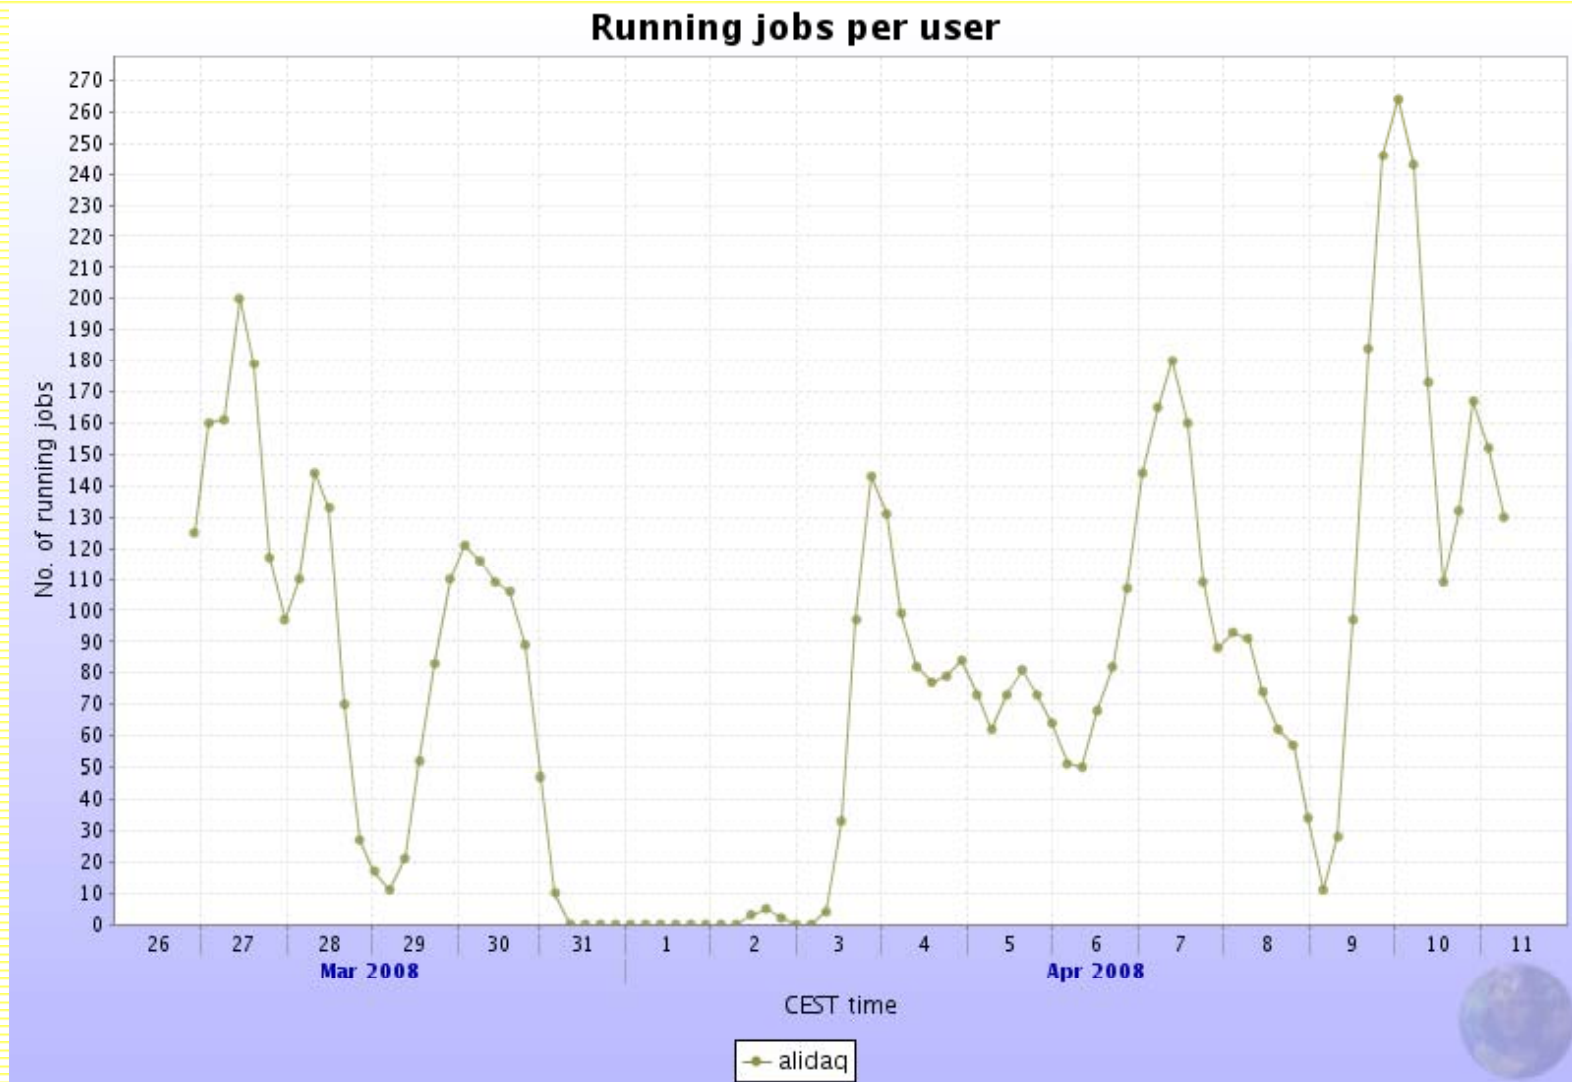

- Unique master-job per each run, under the control of **LPM** tool in MonALISA (C.Grigoras)
 1. Master-job is kept running until 95% of the sub-jobs are DONE
 2. Task queue automatically re-filled if number of waiting jobs < 3500:
number of ERROR_E decreases significantly
- Still some manual intervention: production gets stuck if too many ERROR_V ("rawdata not closed" or "tree not found")

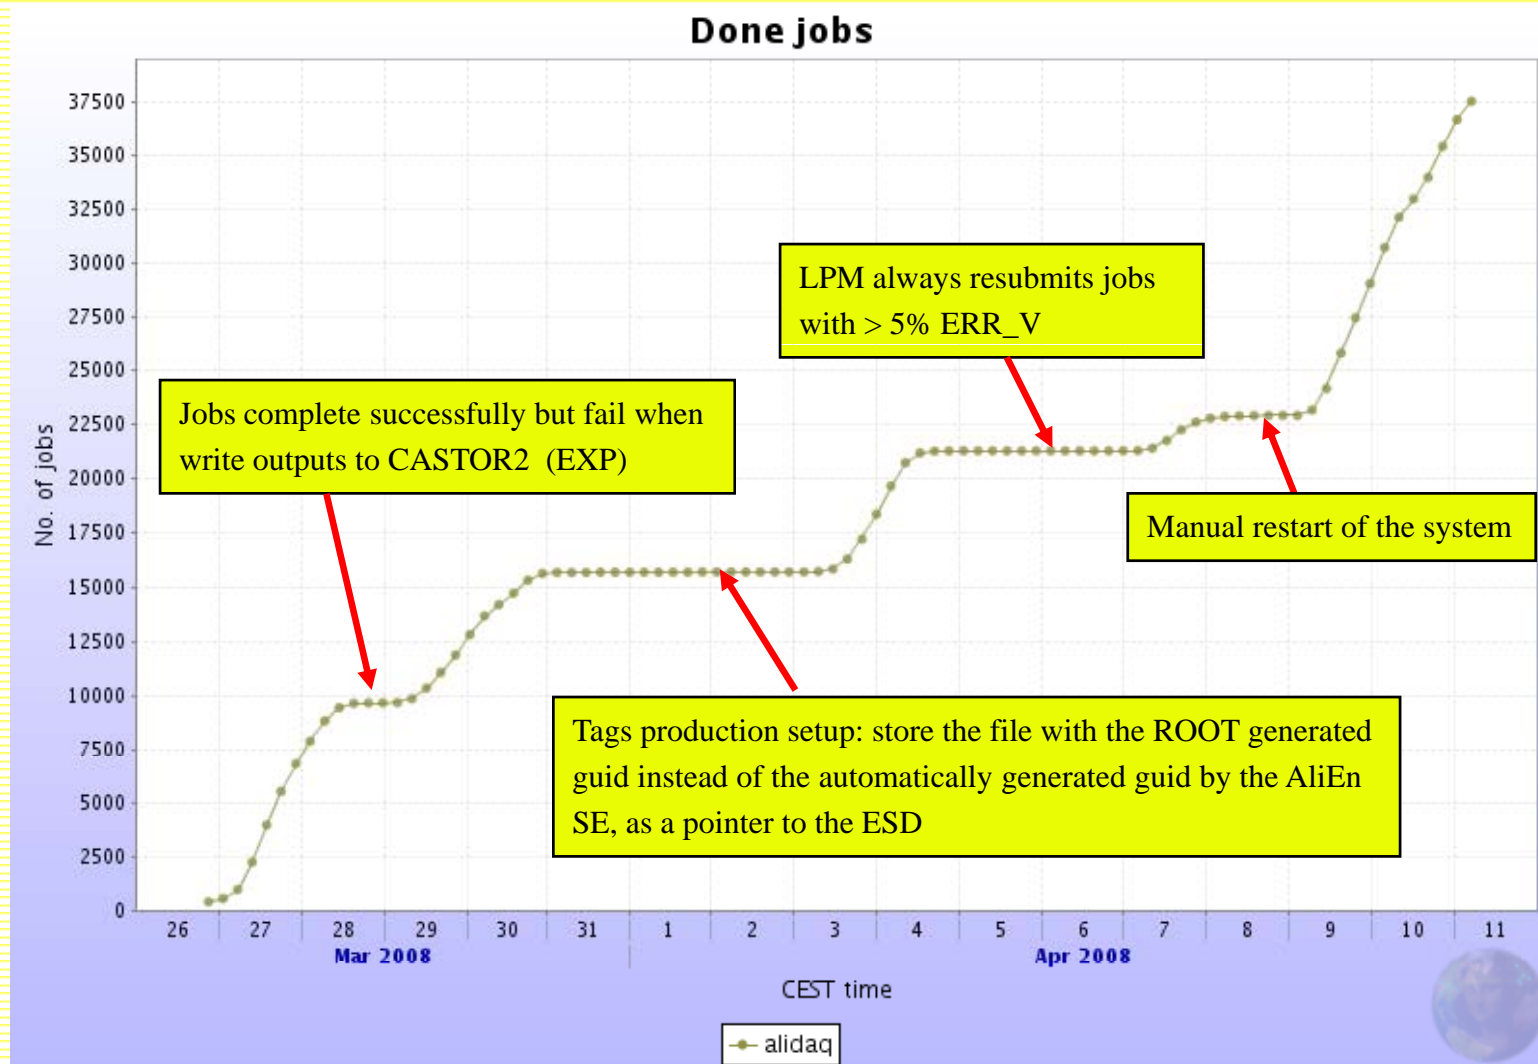

AliEn setup:

- Packages: AliRoot v4-11-Rev-03, ROOT v5-18-00b
- Partition: rawreco (CERN::LCG, CERN-gLite)
- AliEn: split per file options
- Higher priority to user *alidaq* (200 jobs in concurrent mode) since it was squeezed by *aliproduct*
- Average reconstruction time per raw file: ~5mins

Production using LPM (1)

Production using LPM (2)

Production Monitoring

26007	LHC08a	273	248.1 GB	09 Mar 2008 15:28	09 Mar 2008 15:41		229 / 273 (83%)	
26006	LHC08a	231	206 GB	09 Mar 2008 09:21	09 Mar 2008 09:37		214 / 231 (92%)	
25984	LHC08a	3881	3.455 TB	09 Mar 2008 06:16	09 Mar 2008 09:27		3770 / 3881 (97%)	

Next Cosmic

- According to the current reconstruction time per raw file, a "quasi-online production" is doable
- Tool for the shifter: UI installed to run reco choosing the chunks of interest for a given run

```
$ALICE_ROOT/test/cosmic/rec.sh 26042
```

Conclusions

- Golden list successfully reconstructed, what's next?
- Painful to prototype code on the GRID: sometimes code works locally but not on the GRID, sometimes you wait hours to get a result and if it is not the expected one... \$\$\$ò#!!
- LPM has been proved to be a very useful tool
 - Some improvements needed (max number of re-submissions, handling ERROR_V)
- xrootd/alien/ROOT traffic during reconstruction is being monitored using MonALISA
- Need feedback from experts, only ITS gave answer
- Next data taking: runs will be processed after SHUTTLE advertises the EoR?
- Thanks to Fabrizio, Latchezar, Cvetan, Peter, Pablo and Costin for the help to debug and fix the code
