

Dear colleagues,

In order to distribute and execute the analysis tasks more efficiently we need to set a default cpu job length of the jobs. By default the analysis jobs will have a limit of 12h of cpu time (--maxCpuCount). You can always increase this limit by using the maxCpuCount parameter as explained in the wiki:

[https://twiki.cern.ch/twiki/bin/view/PanDA/PandaAthena#example\\_7\\_submit\\_a\\_long\\_running](https://twiki.cern.ch/twiki/bin/view/PanDA/PandaAthena#example_7_submit_a_long_running)

Average length of analysis jobs are 1-2 hours so this limit does not affect 99.99% of the current jobs.
