# Weak Gravitational Lensing

Massey et al.  
review: Refregier 2003

# Weak Gravitational Lensing

Massey et al.  
review: Refregier 2003

# Weak Gravitational Lensing

Massey et al.  
review: Refregier 2003

# Weak Gravitational Lensing

Massey et al.  
review: Refregier 2003

Distortion matrix:

$$\Psi_{ij} = \frac{\partial \delta \theta_i}{\partial \theta_j} = \int dz g(z) \frac{\partial^2 \Phi}{\partial \theta_i \partial \theta_j}$$

# Weak Gravitational Lensing

Massey et al.  
review: Refregier 2003

Distortion matrix:

$$\Psi_{ij} = \frac{\partial \delta \theta_i}{\partial \theta_j} = \int dz g(z) \frac{\partial^2 \Phi}{\partial \theta_i \partial \theta_j}$$

Direct measure of the distribution of **mass** in the universe, as opposed to the distribution of **light**

Theory

# COSMOS Dark Matter Map

COSMOS HST  
ACS survey  
2 deg<sup>2</sup>  
Massey et al.  
2006, Nature

# COSMOS

Schrabback et al. 2010

# Deep Lens Survey

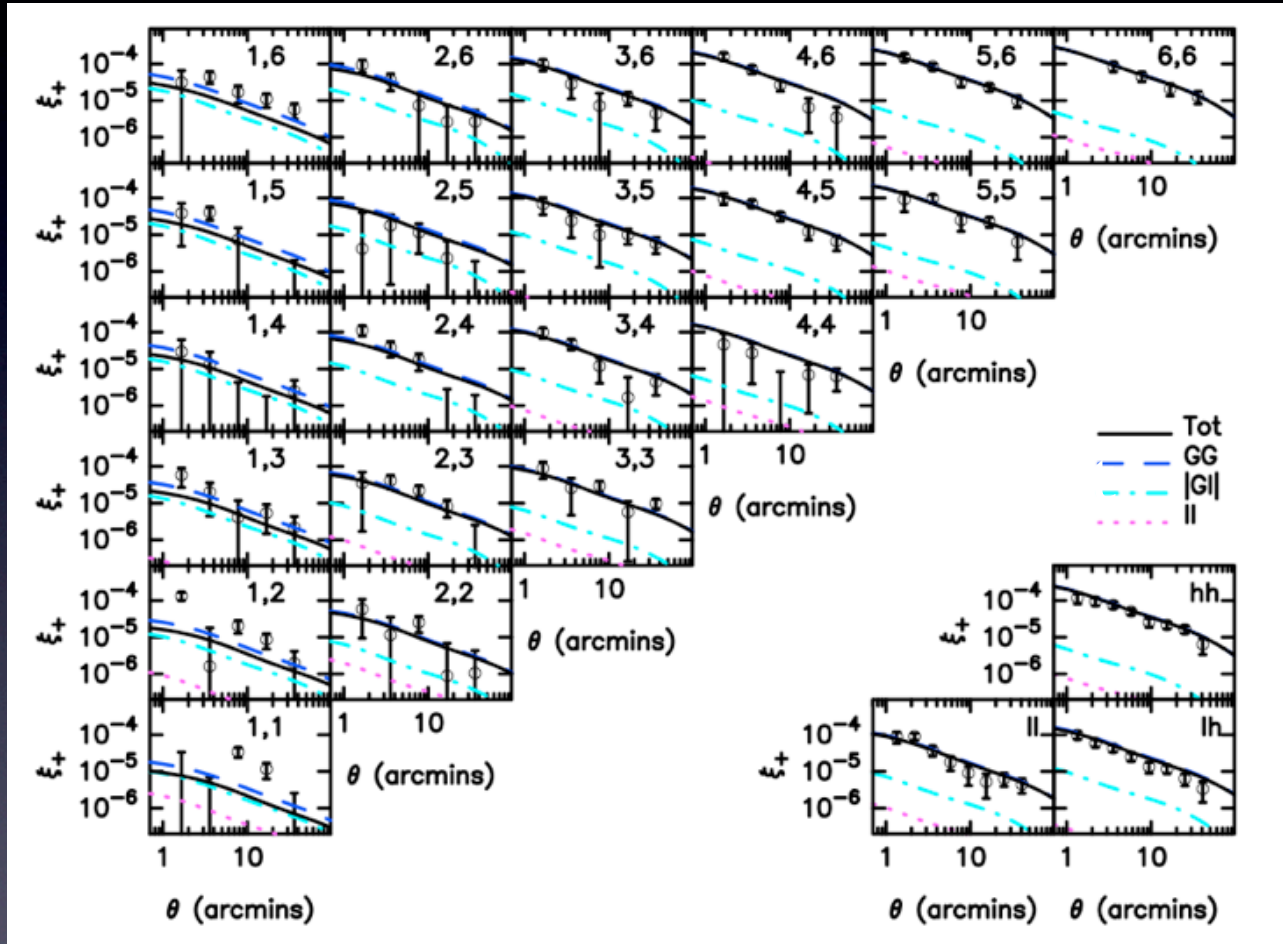

Jee et al. 2013

NOAO Blanco and Mayall 4m  
20 sq. deg, mag < 26.5, median z ~ 1

# CFHTLenS

Heymans et al. 2013

154 sq. deg., median  $z \sim 0.7$

# SDSS Stripe 82

Lin et al. 2011

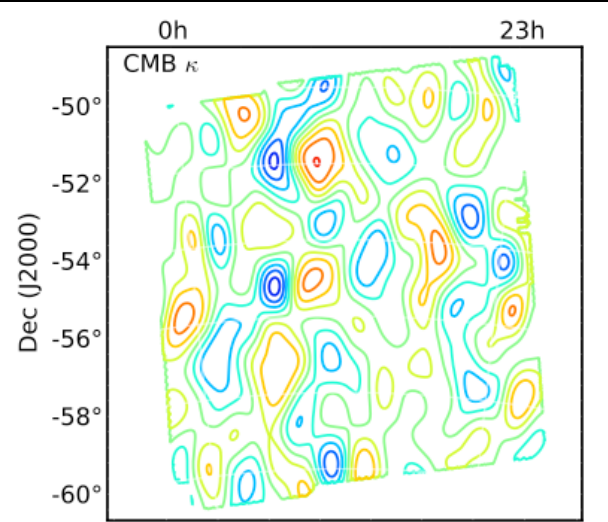

275 sq. deg.  
20-30 coadded exposures  
<2" seeing  
18<i<24, median z~0.6

# CMB Lensing

Planck XVII, 2013

Holder et al. 2013

SPT deep  
100 deg<sup>2</sup>  
lensing

SPT 2540 deg<sup>2</sup>  
Temperature  
Story et al. 2011

# Wide-Field Instruments

CMB		Planck, SPT, ACT
VIS/NIR	Imaging	VST, DES, Pan-STARRS, LSST Euclid, WFIRST, Subaru Boss, Wigglez, DESI, HETDEX
	Spectro	
Radio		LOFAR, SKA

# Dark Energy Survey

Blanco 4m at CTIO  
74 2k×4k CCDs, 0.27"/pix  
2.2 deg<sup>2</sup> FOV  
5000 deg<sup>2</sup> survey (+SNe survey)  
g,r,i,z,y to mag 24  
200M galaxies

First light Sept 2012

# Preliminary Cluster Mass Map

Preliminary cluster mass map from DES Science Verification data  
(by OSU, Penn groups)

# Impact on Cosmology

Amara et al. 2008

	$\Delta w_p$	$\Delta W_a$	$\Delta \Omega_m$	$\Delta \Omega_\Lambda$	$\Delta \Omega_b$	$\Delta \sigma_8$	$\Delta n_s$	$\Delta h$	DE FoM
Current+WMAP	0.13	-	0.01	0.015	0.0015	0.026	0.013	0.013	~10
Planck	-	-	0.008	-	0.0007	0.05	0.005	0.007	-
Weak Lensing	0.03	0.17	0.006	0.04	0.012	0.013	0.02	0.1	180
Imaging Probes	0.018	0.15	0.004	0.02	0.007	0.0009	0.014	0.07	400
Stage IV	0.016	0.13	0.003	0.012	0.005	0.003	0.006	0.020	500
Stage IV+Planck	0.01	0.066	0.0008	0.003	0.0004	0.0015	0.003	0.002	1500
Factor Gain	13	>15	13	5	4	17	4	7	150

Stage IV Surveys will challenge all sectors of the cosmological model:

- **Dark Energy:**  $w_p$  and  $w_a$  with an error of 2% and 13% respectively (no prior)
  - **Dark Matter:** test of CDM paradigm, precision of 0.04eV on sum of neutrino masses (with Planck)
  - **Initial Conditions:** constrain shape of primordial power spectrum, primordial non-gaussianity
  - **Gravity:** test GR by reaching a precision of 2% on the growth exponent ( $d \ln_m / d \ln a_m$ )
- Uncover new physics and map LSS at  $0 < z < 2$ :  
Low redshift counterpart to CMB surveys

# Challenges

Current:

Radiation-Matter transition

High-precision Cosmology era with CMB

Next stage:

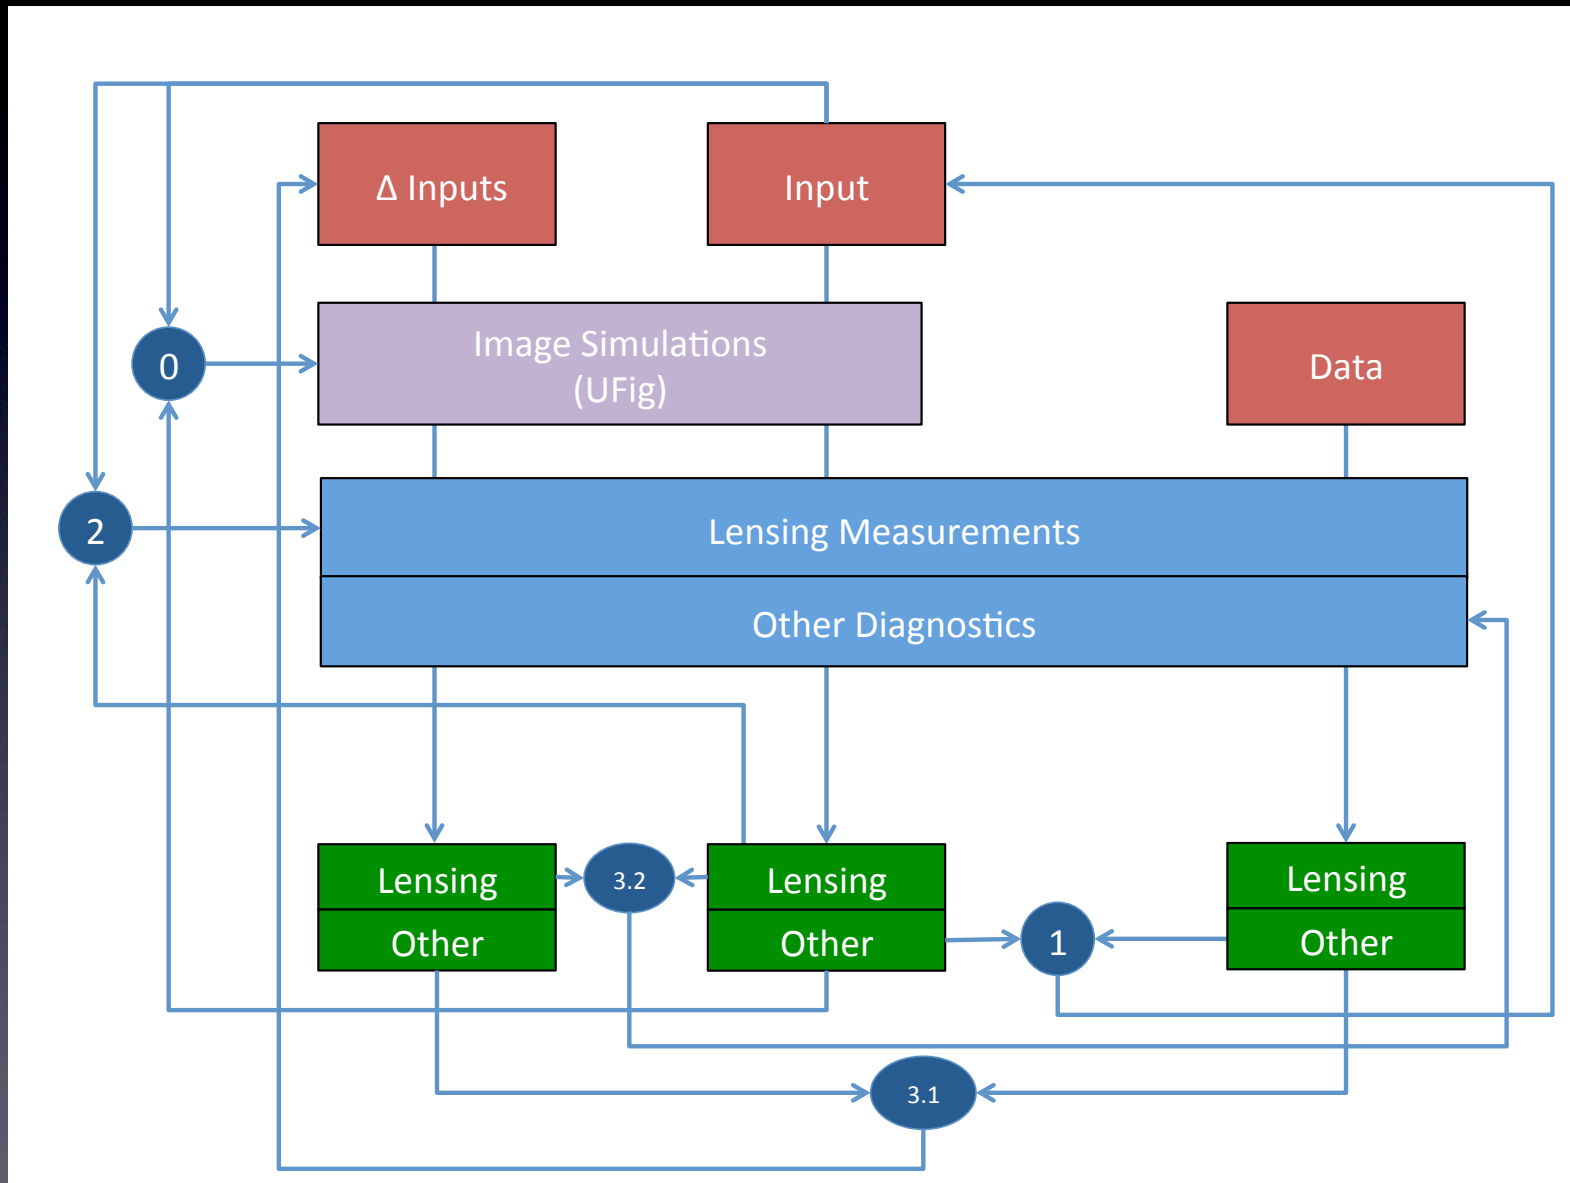

Matter-Dark Energy transition

High-precision Cosmology with LSS surveys, different from CMB:

- ▶ 3D spherical geometry
- ▶ Multi-probe, Multi-experiments
- ▶ Non-gaussian, Non-Linear
- ▶ Systematics limited
- ▶ Large Data Volumes

# Monte-Carlo Control Loops

Refregier & Amara 2013

# UFig Ultra Fast Image Generator

Bergé et al 2012

Subaru Image ( $0.25 \text{ deg}^2$ ,  $R \sim 26$ ,  $10k \times 8k$ )  
generated in:  
-30sec on a laptop  
-30 $\mu$ sec per galaxy

Speed:  
» existing simulation codes  
~ SExtractor analysis

# Conclusions

- ▶ Large-Scale Structure Surveys are a powerful probe of the Dark Universe
- ▶ Upcoming and Future LSS surveys will provide strong constraints but also pose challenges to achieve high-precision
- ▶ Forward Modeling and Fast algorithms will be important for the control of systematics and model extensions

謝謝
