Programming for Concurrency - Exercise 1

Wednesday 18 June 2014 11:45 (1 hour)

Simple exercises not necessarily involving programming are proposed at the beginning to make sure that the main concepts discussed in the lectures have been properly acquired. Real performance driven development of concurrent software then starts, considering small programs and the modification thereof. The power of the new semantics will be illustrated.

Presenter: PIPARO, Danilo (CERN)

Session Classification: Programming for Concurrency
