

Asynchronous Stage-Out model

Hassen Riahi
IT/SDC

Common Projects – Brainstorming

Motivations for the asynchronous stage-out service

- Bulk submission of user transfers
- Transfer resubmissions management
- Handle the user data transfer independently of the storage technologies used
- Avoid the inefficiency of storages due to unscheduled and concurrent stage-out approach by preventing overloads
- Users priority management
- Optimize the usage of the computing resources
 - e.g resubmit only the transfer step and not the whole job

Existing technology: ASO tool
