

TIARA installation

More details will be presented by Timothy Stanley (???)

- The triode and tetrode amplifiers (plus all their power supplies) are installed;
- Tetrode amplifier was operated Wednesday and Thursday last week at 100kW;
- Triode amplifier power supply test completed as of Wednesday this week;
- Triode RF tests due to begin Thursday: target is 500kW.

Tim Stanley is the overall supervisor and is delegated to perform the radiation monitoring.

Tim Stanley's absence today (due to illness) resulted in a problem. The supervision was delegated to Andy Moss who developed the system and superintended its operation at Daresbury.

Doubling target rate

More details will be presented by Paul Smith.

The Beam Request is submitted:

- Date requested: 17-18 Dec 2013;
- We will run with all magnets off and beam stop closed;
- Work in the hall will continue;
- Paul Smith will be on-site;
- Arranging supervision from Dean Adams.

Software and Operations

The first stage of the EMR reconstruction is now in the trunk. and will appear in the next release.

Progress on the communication between DAQ and Run Control (remote START and STOP of the DATE DAQ system). More tests to follow next week.
