## Experimental Results and Future Directions of Various Dielectric Laser Accelerators

Recent experimental results showing proof-of principle acceleration in three distinct Dielectric Laser Accelerator designs are presented and discussed. These designs include the “Double-Grating” structure developed at SLAC, the resonant cavity “Micro-Accelerator Platform developed at UCLA and the “Single-Grating” structure developed at MPQ and the University of Erlangen-Nuremberg. Additionally, the next steps being taken to further develop the Single-Grating structure are highlighted.
