# SRM V2.2 addendum

○ **Tokens for *PrepareToGet/BringOnline/srmCopy* (input)**

  ❑ **Concerns dCache, DPM, StoRM**

  ❑ **Top priority. Should not allow to get a file recalled from tape into a T0D1 space, for T1D1 only if the file was put there in a first instance**

○ **Protecting spaces from (mis-)usage by generic users, Implementations fully VOMS-aware**

  ❑ **Concerns dCache, CASTOR**

  ❑ **Both are closely linked. LHCb wants to set ACLs such that users do not pollute controlled space**

○ **Correct implementation of *GetSpaceMetaData***

  ❑ **Concerns dCache, CASTOR**

    ☆ **Correct size to be returned at least for T1D1**

  ❑ **Should be for TxD1: total space and used space**

○ **Selecting tape sets**

  ❑ **Concerns dCache, CASTOR, StoRM**

    ¿ **by means of tokens, directory paths, ??**

  ¿ **LHCb would be happy with space token assignment. Important that the SAPath be not connected to the space!**
