## **Review of the current status of Higgs Properties**

*Tuesday, 17 June 2014 08:45 (30 minutes)*

I'll report the current status of Higgs property measurements from the Large Hadron Collider experiments ATLAS & CMS. In particular, I'll review the determinations of couplings from combined fits to the individual  $H \rightarrow$  bosons and  $H \rightarrow$  fermions channels. Further, the results of hypothesis tests to verify the spin 0 nature of the Higgs and the current knowledge of differential cross section measurements.
