

Enabling Grids for E-science

Εισαγωγή στο EGEE και το HellasGrid *Introduction to EGEE and HellasGrid*

Athanasia Asiki

aassiki@cslab.ece.ntua.gr

***Computing Systems Laboratory,
National Technical University of Athens***

www.eu-egee.org

INFSO-RI-508833

What is the Grid?

- The *World Wide Web* provides seamless access to information that is stored in many millions of different geographical locations

- The *Grid* is an emerging infrastructure that provides seamless access to computing power and data storage capacity distributed over the globe

- **Collection of geographically distributed heterogeneous resources**
“Most generalized, globalized form of distributed computing”
- **“An infrastructure that enables flexible, secure, coordinated resource sharing among dynamic collections of individuals, institutions and resources”**
Ian Foster and Carl Kesselman
- **Offers access to a virtual and very powerful computing system**
- **A user does not care, in which resource his / her job / jobs is going to be executed**

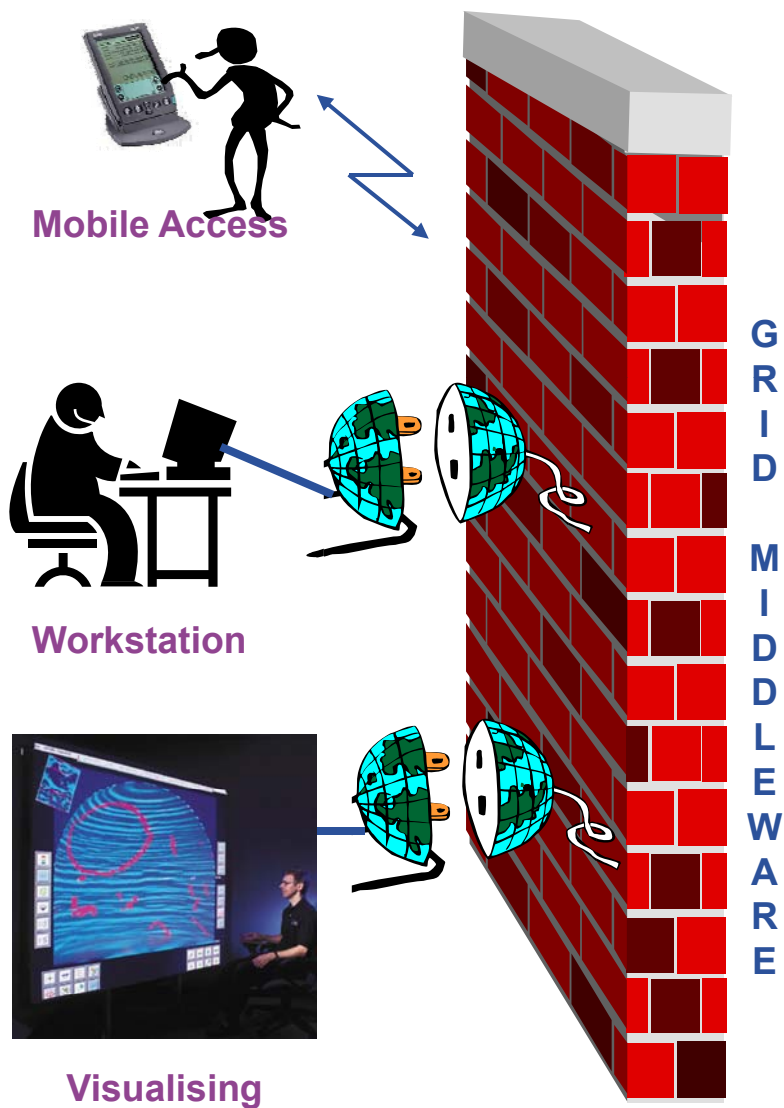

- An entity that is going to be shared

such as:

- ✓ Computational units
- ✓ Storage units
- ✓ Software

- **Resource sharing**
 - Geographically distributed resources offer computational power, storage capacity and bandwidth to the users
- **Secure and reliable access**
 - Authentication
 - Authorization
 - Access policy
- **Open standards**
- **Co-operation among people belonging to different organizations, institutes, groups**

Supercomputer, PC-Cluster

Data-storage, Sensors, Experiments

Internet, networks

- **Development of networking technology (doubling every nine months or so over the last years) and high-speed networks**
 - ✓ widespread penetration of optical fibers
 - ✓ wireless connections
 - ✓ new Internet technologies (ADSL, WiMax)
- **Moore's law everywhere**
 - ✓ Instruments, detectors, sensors, scanners, ...
 - ⇒ Organising their effective use is the challenge
- **Applications require a huge amount of computations to be executed and the collaboration among scientists**

Triumph of Light – *Scientific American*. George Stix, January 2001

- **Science that became feasible and promiscuous by resource sharing (sharing of data, scientific instruments, computational resources, colleagues) across the Internet**
 - ✓ Often very compute intensive
 - ✓ Often very data intensive (both creating new data and accessing very large data collections) – data deluges from new technologies
 - ✓ **Crosses organisational and administrative boundaries**

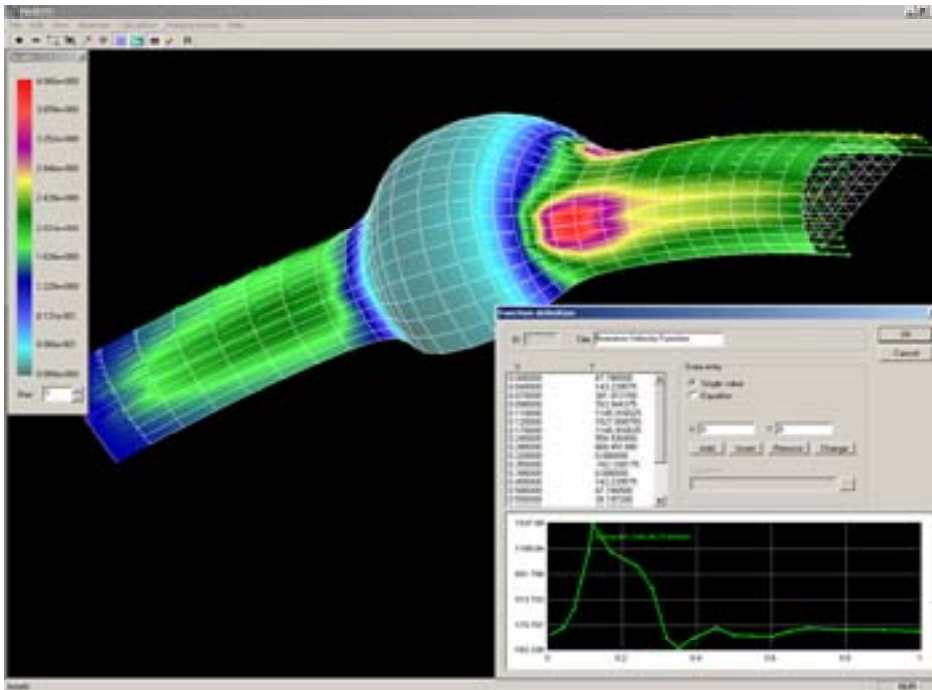

ArchaeoGrid

Create a computer model that weaves together data from many sources and predicts feedback interaction

LOOKING

Observe and analyze data streams in real time. A sensor grid with thousand of different sensors providing real time data and measurements from ocean-going researchers enabling an enormous data grid infrastructure.

Parallel Blood Flow Simulation
 Allows surgeons to perform virtual stent surgery until they get it just right. It combines parameters such as blood velocity and pressure with a series of medical images to automatically create a 3D computational model.

ViroLab

Aims to create a collaborative virtual laboratory for grid-based decision support for viral disease treatment. HIV treatment in the increasingly common case of HIV drug resistance is mainly studied. Virolab “vertically” integrates biomedical information relating to viruses, patients and literature resulting in a rule-based decision support system for drug ranking.

Polar Grid

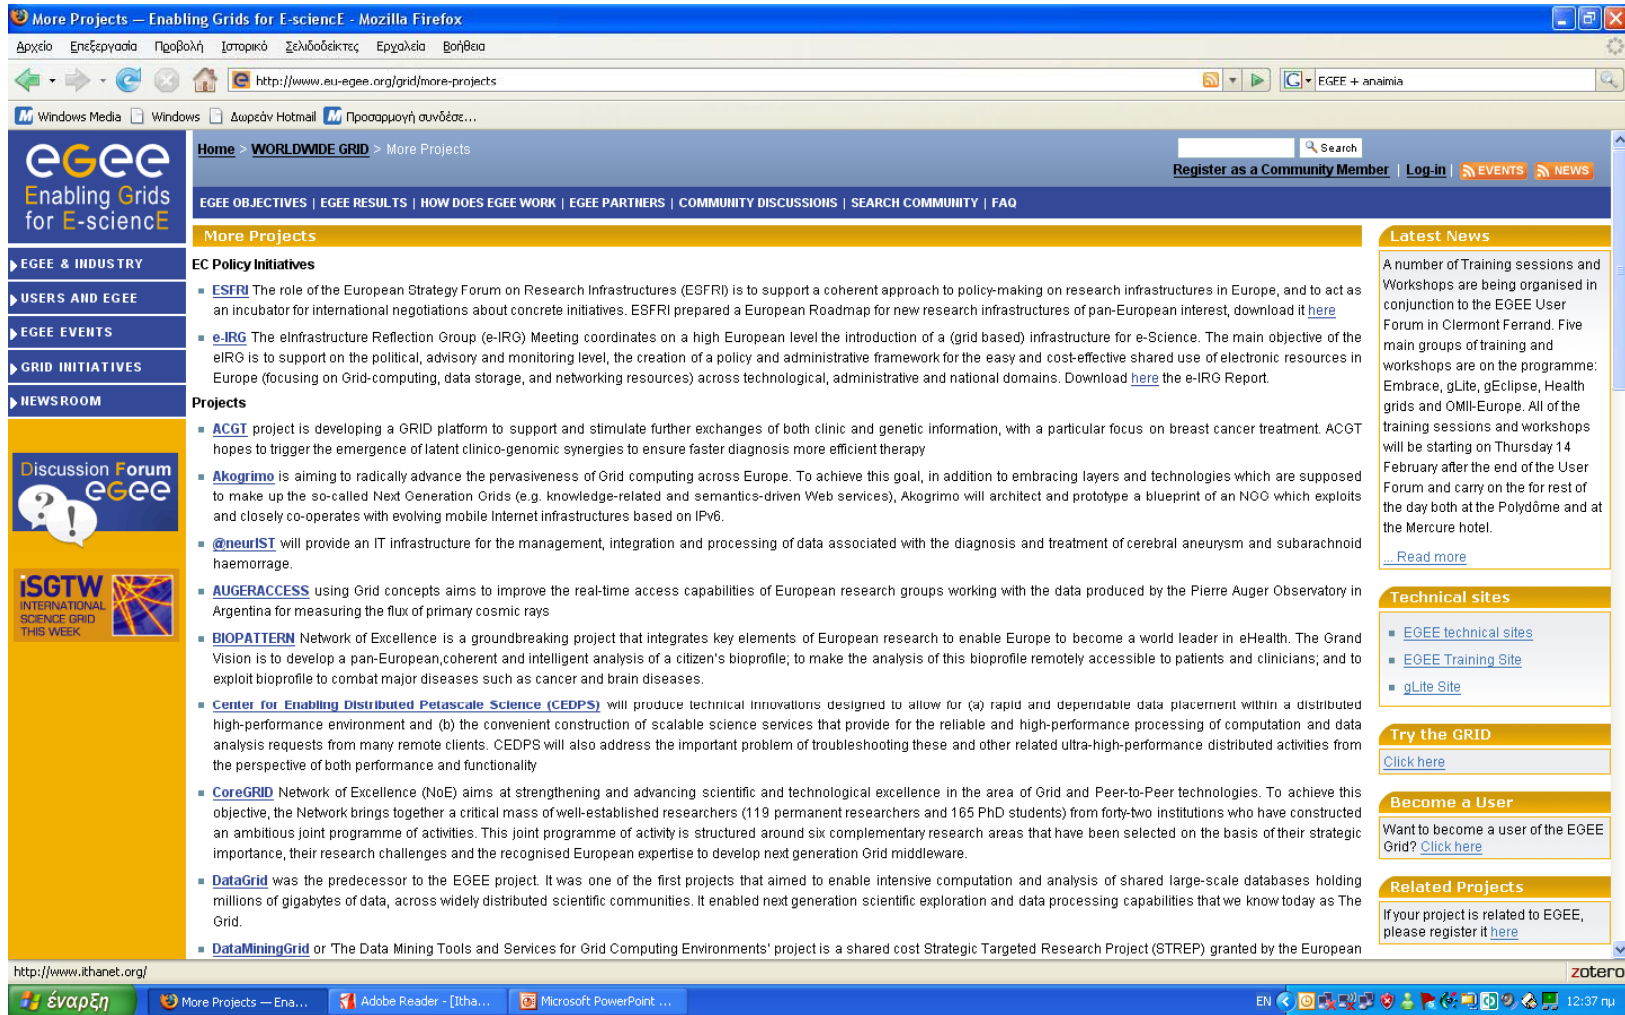

A planned project for an advance cyberinfrastructure, empowering smaller universities, and provide scientists with a gateway to teraflops of power: enough to drive new and improved high-performance simulations and enable measurement and prediction of ice sheet response to climate change and effect on ocean levels.

MoSES (Modelling and Simulation for e-Social Science)

Runs predictive models integrating real Census data, survey data, healthcare data of UK population. Determine the impact of different policy decisions and various social aspects like increasing life expectancy, immigration, aging population.

• <http://www.eu-egee.org/grid/more-projects>

The screenshot shows the 'More Projects' page of the EGEE website. The browser window title is 'More Projects — Enabling Grids for E-science - Mozilla Firefox'. The address bar shows the URL 'http://www.eu-egee.org/grid/more-projects'. The website header includes the EGEE logo and navigation links like 'Home', 'WORLDWIDE GRID', and 'More Projects'. A search bar and links for 'Register as a Community Member', 'Log-in', 'EVENTS', and 'NEWS' are also present. The main content area is titled 'More Projects' and lists several projects under the heading 'EC Policy Initiatives' and 'Projects'. The 'Projects' section includes:

- ACGT** project is developing a GRID platform to support and stimulate further exchanges of both clinic and genetic information, with a particular focus on breast cancer treatment. ACGT hopes to trigger the emergence of latent clinico-genomic synergies to ensure faster diagnosis more efficient therapy
- Akogrino** is aiming to radically advance the pervasiveness of Grid computing across Europe. To achieve this goal, in addition to embracing layers and technologies which are supposed to make up the so-called Next Generation Grids (e.g. knowledge-related and semantics-driven Web services), Akogrino will architect and prototype a blueprint of an NGO which exploits and closely co-operates with evolving mobile Internet infrastructures based on IPv6.
- @neurIST** will provide an IT infrastructure for the management, integration and processing of data associated with the diagnosis and treatment of cerebral aneurysm and subarachnoid haemorrhage.
- AUGERACCESS** using Grid concepts aims to improve the real-time access capabilities of European research groups working with the data produced by the Pierre Auger Observatory in Argentina for measuring the flux of primary cosmic rays
- BIOPATTERN** Network of Excellence is a groundbreaking project that integrates key elements of European research to enable Europe to become a world leader in eHealth. The Grand Vision is to develop a pan-European, coherent and intelligent analysis of a citizen's bioprofile; to make the analysis of this bioprofile remotely accessible to patients and clinicians; and to exploit bioprofile to combat major diseases such as cancer and brain diseases.
- Center for Enabling Distributed Peta-scale Science (CEDPS)** will produce technical innovations designed to allow for (a) rapid and dependable data placement within a distributed high-performance environment and (b) the convenient construction of scalable science services that provide for the reliable and high-performance processing of computation and data analysis requests from many remote clients. CEDPS will also address the important problem of troubleshooting these and other related ultra-high-performance distributed activities from the perspective of both performance and functionality
- CoreGRID** Network of Excellence (NoE) aims at strengthening and advancing scientific and technological excellence in the area of Grid and Peer-to-Peer technologies. To achieve this objective, the Network brings together a critical mass of well-established researchers (119 permanent researchers and 165 PhD students) from forty-two institutions who have constructed an ambitious joint programme of activities. This joint programme of activity is structured around six complementary research areas that have been selected on the basis of their strategic importance, their research challenges and the recognised European expertise to develop next generation Grid middleware.
- DataGrid** was the predecessor to the EGEE project. It was one of the first projects that aimed to enable intensive computation and analysis of shared large-scale databases holding millions of gigabytes of data, across widely distributed scientific communities. It enabled next generation scientific exploration and data processing capabilities that we know today as The Grid.
- DataMiningGrid** or 'The Data Mining Tools and Services for Grid Computing Environments' project is a shared cost Strategic Targeted Research Project (STREP) granted by the European

On the right side of the page, there is a 'Latest News' section with a headline: 'A number of Training sessions and Workshops are being organised in conjunction to the EGEE User Forum in Clermont Ferrand. Five main groups of training and workshops are on the programme: Embrace, gLite, gEclipse, Health grids and OMI-Europe. All of the training sessions and workshops will be starting on Thursday 14 February after the end of the User Forum and carry on the rest of the day both at the Polydôme and at the Mercure hotel.' Below this is a 'Technical sites' section with links to 'EGEE technical sites', 'EGEE Training Site', and 'gLite Site'. There are also sections for 'Try the GRID', 'Become a User', and 'Related Projects'.

GEANT2

Budget: 178.643.730 €
Duration: 4 years

“GÉANT2 is the seventh generation of pan-European research and education network, successor to the pan-European multi-gigabit research network GÉANT”

European Commission
Information Society
and Media

<http://www.geant2.net/>

- The project officially started on 1 September 2004 and will continue to take place for the next 4 years
- The project is supported by the European Committee and by 30 European National Research and Education Networks (NRENs) in 34 countries and is administrated by DANTE (*Delivery of Advanced Network Technology to Europe*).
- It provides services of high quality and readability in the European Education and Research community and connects all the National Research Networks of European Union, Centre and East Europe, Israel and Cyprus

- It provides:
 - Basic IPs services
 - Quality of service levels
- Two main services:
 - Routed (Internet) and switched (L1-L2)
- Backbone mixed:
 - Part of will be based on dark fiber
 - Part of it on leased services
- Greece interconnection:
 - 2 * 10Gbps lambdas

GÉANT2

The world-leading research and education network for Europe.

★ Connect ★ Communicate ★ Collaborate

GÉANT2 is operated by DANTE on behalf of Europe's NRENs.

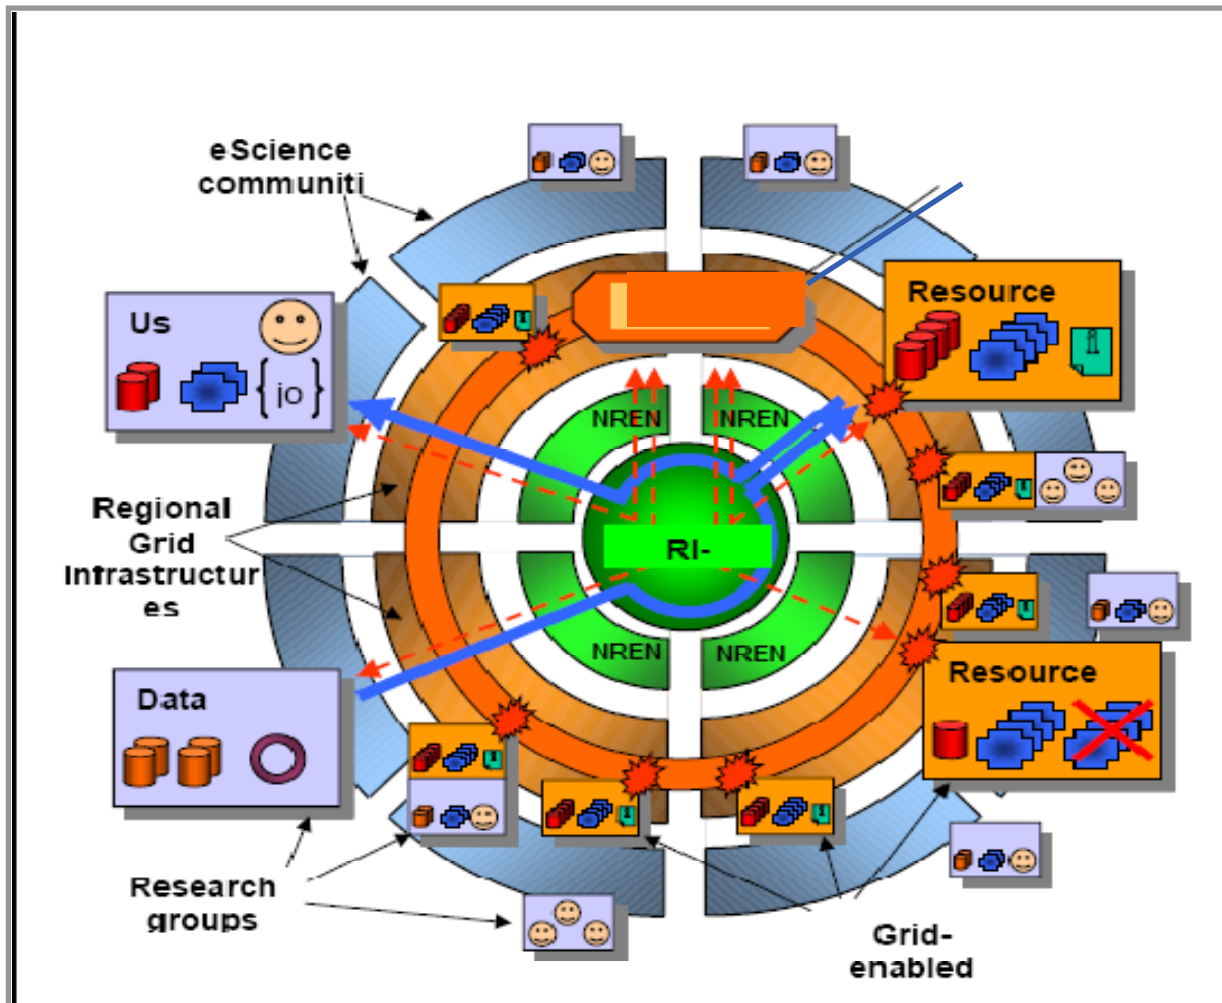

United Kingdom	Netherlands	Germany	France	Italy	Spain	Portugal	Switzerland	Slovenia	Croatia	Hungary	Poland	Czech Republic	Slovakia	Denmark	Belgium	Luxembourg	Denmark	Sweden	Norway	Finland	Iceland	Cyprus	Greece	Turkey	Bulgaria	Romania	Moldova	Ukraine	Russia
----------------	-------------	---------	--------	-------	-------	----------	-------------	----------	---------	---------	--------	----------------	----------	---------	---------	------------	---------	--------	--------	---------	---------	--------	--------	--------	----------	---------	---------	---------	--------

*Connections between these countries are part of NORDUnet (the Nordic regional network)

GÉANT2 is co-funded by the European Commission
its 6th R&D Framework Programme.

Key

-  User
-  Storage
-  CPU/processing
-  Information
-  Instrumentation
-  User data flow
-  Requests, information, monitoring and control

LHC (Large Hadron Collider)

- LHC will collide beams of protons at an energy of 14 TeV
- If the Higgs boson exists, the LHC will almost certainly find it!
- *Four experiments, with detectors:*

ALICE

ATLAS

CMS

LHCB

Starting from this event (particle collision) ...

- ✓ Data Collection
- ✓ Data Storage
- ✓ Data Processing

You are looking for this “signature”...

• *Selectivity: 1 in 10¹³*

✓ *Like looking for 1 person in a thousand world populations!*

✓ *Or for a needle in 20 million haystacks!*

- The LHC Computing Grid Project (LCG) was born to prepare the computing infrastructure for the simulation, processing and analysis of the data of the Large Hadron Collider (LHC) experiments.
- ⇒ The processing of the enormous amount of data, that will be generated, will require large computational and storage resources and the associated human resources for operation and support.
- ⇒ Preparation of a common infrastructure of
 - ✓ libraries
 - ✓ tools
 - ✓ frameworks
 required to support the physics application software

- **Virtual Organization**

“A set of individuals and / or institutions defined by highly controlled sharing rules, with resource providers and consumers defining clearly and carefully just what is shared, who is allowed to share and the conditions under which sharing occurs”

Ian Foster

- **Abstract entities grouping users, institutions and resources in the same administrative domain**

- ↪ **What is going to be shared ?**

- ✓ resources

- ✓ software

- ✓ special equipment

- ✓ licenses

- ✓ services

- ✓ Internet bandwidth

- Astrophysics, astro-particle physics
- Biomedical and Bioinformatic Applications
- Computational chemistry
- Earth sciences
- Finance
- Fusion
- Geophysics
- High-energy physics
- Infrastructure
- Other ...

- Our regional VO: SEE
- VO for trainings : hgdemo

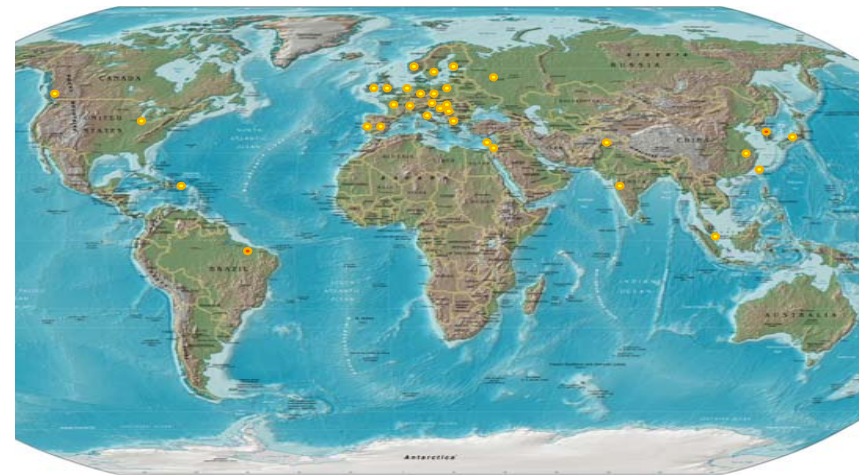

- **List of existing VOs**
 - <http://cic.gridops.org/index.php?section=home&page=volist#1>

- **EGEE objective:**

“to establish a seamless European Grid infrastructure for the support of the European Research Area (ERA)”

- **EGEE:**

- Accomplished all of its objectives
- Scope expanded beyond Europe

- **EGEE-II start:**

- Full capacity from day one
- Large-scale, production-quality infrastructure
- Supporting a wide range of applications
- Staff with extensive knowledge of Grid technology

- **EGEE-II aims to provide a production quality Grid infrastructure across the European Research Area and beyond.**

↳ Started on 1 April 2006

↳ Available infrastructure to the Research and Academic community 24 hours per day and 7 days per week

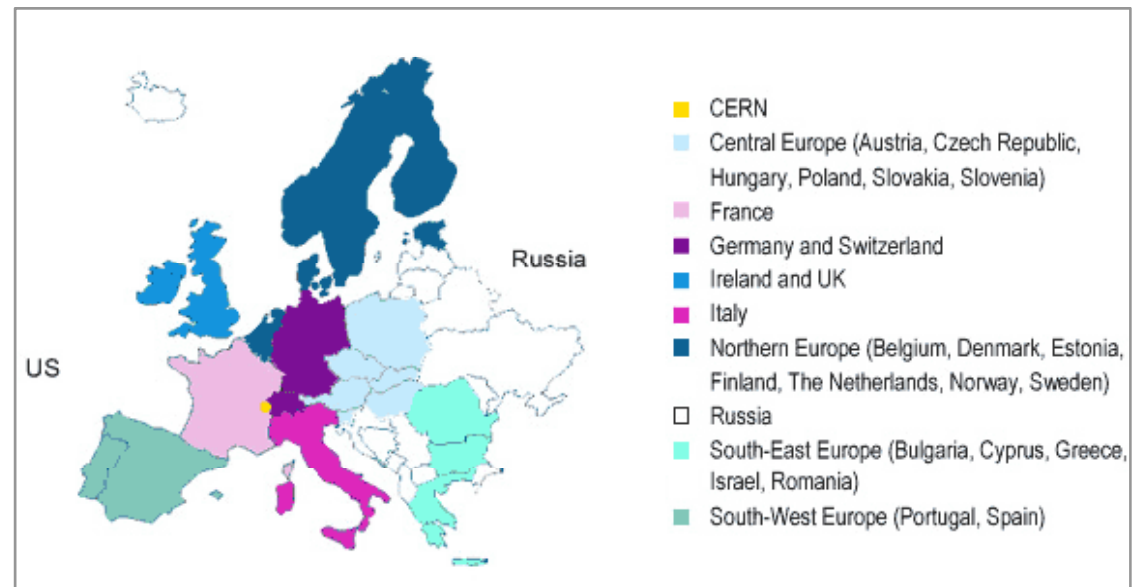

↳ Participants:

- ✓ 240+ institutions
- ✓ 45 countries

↳ Consists of:

- ✓ 202 sites
- ✓ ≈41.000 CPUs
- ✓ ≈5 PB
- ✓ 100,000 concurrent jobs

- <http://www.eu-egee.org/>

- Information about sites: <http://goc.grid.sinica.edu.tw/gstat/>

- **Mission:**
 - ✓ Manage and operate production Grid infrastructure for the European Research Area
 - ✓ Interoperate with e-Infrastructure projects around the globe (Open Standards-GGF) and Contribute to Grid standardisation efforts
 - ✓ Incorporate new users from the industry and from the research community as well assuring the best possible training and support
- **Support applications deployed from diverse scientific communities:**
 - ✓ High Energy Physics
 - ✓ Earth Sciences
 - ✓ Computational Chemistry
 - ✓ Fusion
 - ✓ Biomedicine
 - ✓ Astrophysics
 - ✓ Finance, Multimedia
 - ✓ Geophysics
 - ...
- Prepare for a permanent/sustainable European Grid Infrastructure (in a GÉANT2-like manner)

- **Networking activities**

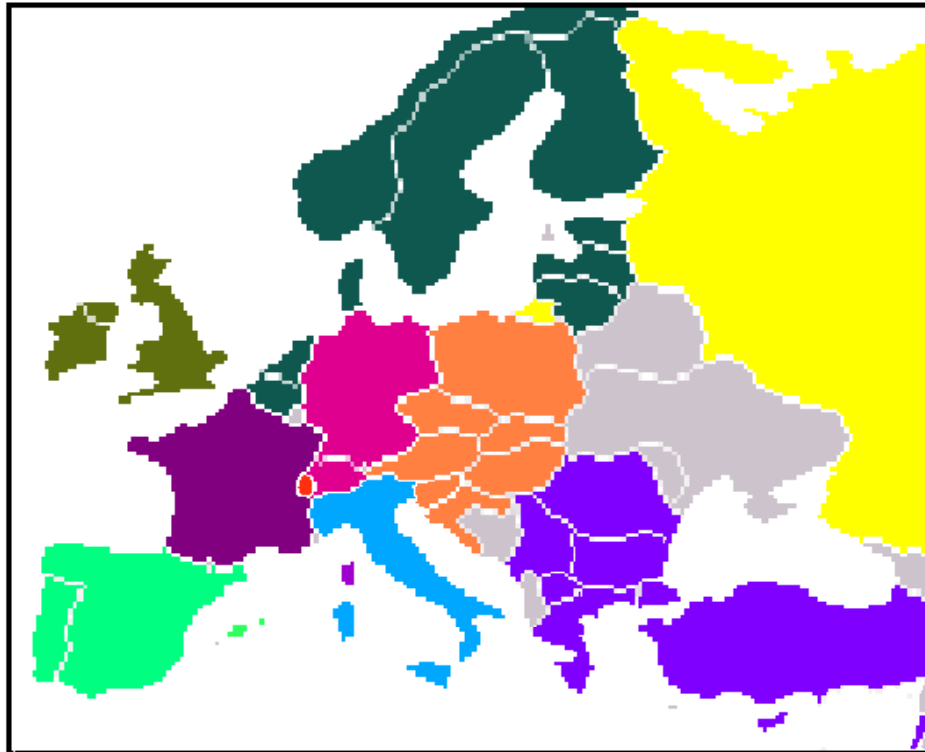

Include NA1 (Project Management), NA2 (Dissemination, Outreach and Communication), NA3 (User Training and Induction), NA4 (Application Identification and Support), and NA5 (Policy and International Cooperation)

- **Service activities**

Consist of SA1 (European Grid Operations, Support and Management), SA2 (Networking Support) and SA3 (Middleware Integration, Testing and Certification) combining software elements from a variety of sources to provide integrated releases for deployment on the infrastructure

- **Joint Research activities**

JRA1 (Middleware Re-Engineering) will continue to develop and support the gLite middleware and JRA2 (Quality Assurance) will manage quality throughout the project, including overall security and coordination.

Regional Operations Centres (ROC)

- Front-line support for user and operations issues
- Provide local knowledge and adaptations
- One in each region – many distributed

User Support Centre (GGUS)

- In FZK: provide single point of contact (service desk), portal

• <https://gus.fzk.de/pages/home.php>

- **Part of the EGEE project**
- **Next generation middleware for grid computing**
- **In its development participate from different academic and industrial European centers**
- *Provides services for computing element, data management, accounting, logging and bookeping, information and monitoring, service discovery, security, workload management*

- **Operating system:**
 - Linux (+GNU utilities), usually a RHEL3-like, for example Scientific Linux 3.0.7, Fedora Core 3, etc
- **Middleware:**
 - gLite v3.0 (LCG)
- **Libraries and Applications**
 - Defined by the system and VOs administrators' foresight
 - The user can install and execute its own programmes

Each VO according to its needs installs experimental software:

- **ATLAS:** atlas software (a big collection, v12.2.0 etc)
- **CMS:** cmkin, cobra, famos, geometry, ignominy, orca, oscar
- **ALICE:** alien, alice, root, proof
- **LHCb:** dirac, boole, DC, decfiles, gauss, paramfiles
- **BIOMED:** gate, cdss, gps@, gromacs, simri3d, gptm3d
- **ESR:** (earth science specific... eg, idl package)

- **The users can negotiate with their VOs for the installation of needed software**

• <http://www.grid.auth.gr/pki/seegrid-ca/>

GridAUTH Operations Center

On July 2007, the GridAUTH Operations Center of the Aristotle University of Thessaloniki, implemented the SeeGrid Certification Authority, in order to facilitate the needs for Grid computing in the wider area of the Balkans.

The scope of the SeeGrid CA is to provide PKI services to the SEE countries - members of the SeeGrid project - that did not have the opportunity to establish their own national grid PKI infrastructure.

The SeeGrid CA is operated by the GridAUTH Operations Center at the Aristotle University of Thessaloniki under the supervision of GRNET as the SeeGrid Coordinator. GRNET is owned and supervised by the General Secretariat of Research and Technology, Greek Ministry of Development.

User Documentation

Overview

Does the Grid sound complex and obscure? Want to know more? For complete beginners, please have a look at this introduction from CERN: <http://gridcats.web.cern.ch/gridcats/>

The following pages guide you through the process of using the Grid. The instructions cover three different kinds of perspective users:

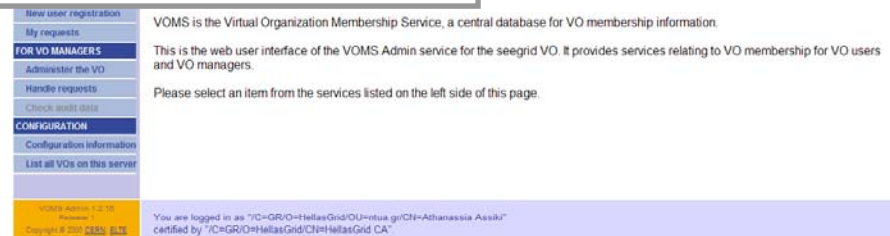

- New experimental users; and application.
- New production users; those new to the regional Grid.
- Experienced production users of the regional Grid.

Also, this document gives the acceptable usage of the Grid.

The general documentation for user access to the Grid is available at: <http://sa1.web.cern.ch/egee-sa1/using.htm>. Refer to this page for more information. If you are a cluster administrator (and want to know how to use the Grid) refer to the Europe cluster RC Administrator's documentation [here](#)

• EGEE Helpdesk:

• <https://helpdesk.egee-see.org/index2.php>

VOMS is the Virtual Organization Membership Service, a central database for VO membership information.

This is the web user interface of the VOMS Admin service for the seegrid VO. It provides services relating to VO membership for VO users and VO managers.

Please select an item from the services listed on the left side of this page.

FOR VO MANAGERS

- Administer the VO
- Handle requests
- Check audit data

CONFIGURATION

- Configuration information
- List all VOs on this server

Enabling Grids for E-science

HellasGrid Infrastructure, Phase I & II

- **HellasGrid I**
 - Located at N.C.S.R. Demokritos (a.k.a. Isabella)
 - 34 dual Intel **P4 Xeon @ 2.8GHz, 1GB RAM, 2x 70GB SCSI HDD**, 2x Gbit
 - IBM FAStT900 Storage Area Network
 - 2x Redundant Fiber Channel Controllers with 1Gbyte Cache each
 - 70x146.8GB= **10,276TB raw storage capability**, over 5 disk shelves
 - Tape Library ~30 TBytes, integrated monitoring
 - December 2004
- **HellasGrid II**
 - 5 sites: EKT (>220), ΙΕΣΕ (48), ΑΠΘ (128), ΙΤΕ (128), ΙΤΥ (128)
 - ~700 CPUs **x86_64, 2 GB RAM, 1x 80GB SATA HDD**, 2x Gbit
 - ~20 TBytes storage space in SAN (5x 4TBs)
 - ~50 TBytes Tape Library in National Documentation Center

<http://hellasgrid-ui.ics.forth.gr/HG/>

The screenshot shows a web browser window displaying the HellasGrid Accounting Data interface. The browser address bar shows the URL <http://hellasgrid-ui.ics.forth.gr/acctROC/>. The page features the eGEE logo and a navigation menu on the left with categories: JOBS, CPU TIME, ELAPSED TIME, MEMORY, CUSTOM, REPORTS, and USERS. The main content area displays the 'ROC Accounting Data' logo and a section titled 'Instructions' which lists the following metrics:

- JOBS**
 - Number of jobs Total number of jobs run
- CPU TIME**
 - Norm. Sum CPU Normalised CPU time to a reference value of 1000 *SpectInt2000*
 - Sum CPU time Total CPU time used
 - Avg CPU time Average CPU time
- ELAPSED TIME**

At the bottom of the browser window, a search bar contains the text 'Find: Fran' and buttons for 'Find Next', 'Find Previous', 'Highlight', and 'Match case'.
