Baryon Asymmetry of the Universe

$$\eta_B = \frac{n_B}{n_\gamma} \sim (6.04 \pm 0.09) \cdot 10^{-10}$$

[A. Coc et al. '14]

- 1 The matter/antimatter question

- 3 Hidden Sector
- 4 Higgs Portal Leptogenesis

Standard Leptogenesis [Luty '91]

$$-\mathcal{L} = \underbrace{\lambda_{ji} N_i L_j \cdot H}_{\text{CP-violation}} + \underbrace{M_i N_i N_i}_{\text{Lepton violation}} + h.c$$

- 1 Populate leptons: $N \rightarrow LH + N \rightarrow \overline{LH}$,
- 2 Lepton over anti-leptons: $N \rightarrow LH > N \rightarrow \overline{LH}$,
- 3 Slow reaction rates: $\Gamma_N < H(T)$,
- 4 Sphalerons: $\eta_L \rightarrow \eta_B$

✓ Sakharov's conditions [Sakharov '67]

✓ See-saw

$$m_\nu \sim \frac{|\lambda|^2 v^2}{M} \sim 10^{-11} \text{ GeV}$$

Standard Leptogenesis

CP-asymmetry [Davidson et al. '02]

$$\epsilon_1 \sim \frac{\text{Im}\{(\lambda^\dagger \lambda)^2\}}{8\pi(\lambda^\dagger \lambda)} \mathcal{F}\left(\frac{M_2}{M_1}\right) \xrightarrow[\text{Hierarchical}]{\text{See-saw}} |\epsilon_1| \lesssim \frac{3m_\nu}{8\pi v^2} M_1$$

Boltzmann equations [Buchmuller et al. '04]

$$Y_1' = -D_1(Y_1 - Y_1^{\text{eq}}) \quad , \quad Y_{L-\bar{L}}' = \epsilon_1 D_1(Y_1 - Y_1^{\text{eq}}) - W_{ID_1} Y_{L-\bar{L}}$$

Standard Leptogenesis

Efficiency : $Y_{L-\bar{L}}^f \sim \epsilon_1 \kappa_1^f$

D.I. bound : $\epsilon_1 \lesssim \frac{3m_\nu}{8\pi V^2} M_1$

Sphalerons : $Y_{L-\bar{L}}^f \sim 2\eta_B$

[Harvey & Turner '90]

$$\kappa_1^f < 1 \quad , \quad \epsilon_1 > 10^{-9} \quad , \quad M_1 > 10^8 \text{ GeV}$$

- Large scale
- No opening to Dark sector

- 1 The matter/antimatter question
- 2 Standard Leptogenesis
- 3 Hidden Sector**
- 4 Higgs Portal Leptogenesis

Include a Hidden Sector

- Visible Sector: SM
- Hidden Sector: e.g. DM
- Mediator: S, A_μ, ψ

SM-HS Effective interactions: Portals

$$\mathcal{L} = \sum_{n_1, n_2} \frac{\mathcal{O}_{SM}^{n_1} \mathcal{O}_{HS}^{n_2}}{\Lambda^{n_1+n_2-4}}, \quad \text{Renormalisable: } n_1 + n_2 \leq 4$$

Higgs and Neutrino portals

- $\mathcal{L}_{Higgs} = \beta S H^\dagger H + \gamma S^2 H^\dagger H$
- $\mathcal{L}_{SNN} = \alpha_{ij} S N_i N_j, \quad \langle S \rangle = 0$

- 1 The matter/antimatter question
- 2 Standard Leptogenesis
- 3 Hidden Sector
- 4 Higgs Portal Leptogenesis**

Higgs Portal Leptogenesis

$$-\mathcal{L} = \underbrace{\alpha_{ij} N_i N_j S + \beta S H^\dagger H + \gamma H^\dagger H S^2}_{\text{Hidden sector}} + \underbrace{\lambda_{ij} N_i H \cdot L_j + M_i N_i N_i}_{\text{Standard sector}}$$

New CP-asymmetry channels

CP-asymmetries

$$|\epsilon_1| \sim \frac{3m_\nu}{8\pi v^2} M_1 \quad , \quad |\epsilon_2| \sim \frac{3m_\nu}{16\pi v^2} M_2 + \frac{\alpha\beta}{8\pi M_2} \sqrt{\frac{M_1}{M_2}} + \frac{\alpha^2}{16\pi} \sqrt{\frac{M_1}{M_2}}$$

Low Scale CP-asymmetry

Hidden CP-asymmetry
dominates

$$M_2^2 < \frac{2v^2}{3m_\nu} \alpha\beta \sqrt{\frac{M_1}{M_2}}$$

Standard CP-asymmetry
dominates

$$M_2^2 > \frac{2v^2}{3m_\nu} \alpha\beta \sqrt{\frac{M_1}{M_2}}$$

$$Y_2' = - (Y_2 - Y_2^{eq}) (D_2 + D_{2\leftrightarrow 1}) + D_{2\leftrightarrow 1} (Y_1 - Y_1^{eq}) \frac{Y_2^{eq}}{Y_1^{eq}}$$

$$Y_1' = - (Y_1 - Y_1^{eq}) \left(\frac{D_1}{\sqrt{r_{21}}} + D_{2\leftrightarrow 1} \frac{Y_2^{eq}}{Y_1^{eq}} \right) + D_{2\leftrightarrow 1} (Y_2 - Y_2^{eq})$$

$$Y'_{L-\bar{L}} = \sum_{i=1,2} \left[\epsilon_i D_i (Y_i - Y_i^{eq}) - Y_{L-\bar{L}} W_i \right] \frac{M_i}{M_1}$$

Low Scale Example

$$M_2 = 10^3 \text{ GeV} \quad , \quad M_1 = 10^2 \text{ GeV} \quad , \quad \epsilon_1 \sim 10^{-15} \quad , \quad \epsilon_2 \sim 10^{-8}$$

$$m_{\nu_i} \sim K_i \cdot 10^{-12} \text{ GeV}$$

$$\lambda_i^2 \sim 8\pi K_i \frac{M_i}{10^{12} \text{ GeV}}$$

- $m_{\nu_1} \sim 10^{-13} \text{ GeV}, m_{\nu_2} \sim 10^{-11} \text{ GeV}$
- $\alpha \sim 10^{-6}, \beta = 200 \text{ GeV}$

Conclusions

Open Leptogenesis to Dark Sector

- Higgs Portal: $\beta HHS + \alpha NNS$
- CP-asymmetry: $\epsilon \propto \beta/M$

Low mass scale CP-asymmetry

- $M_2 < M_2^{crit} \rightarrow |\epsilon_2| \propto \alpha\beta/M_2$

2-level Leptogenesis models

- $Y_{L-\bar{L}}^f \sim Y_{L-\bar{L}}^{(1)} + Y_{L-\bar{L}}^{(2)}$

Viable low scale models

- $M_1 \sim M_2 \sim 10^3 \text{ GeV}$
