Physics with b-baryons at LHCb

Tuesday, 6 May 2014 16:45 (15 minutes)

The amount of b-baryons produced at the LHC is unprecedented. Studies of decays of b-baryons allow searches for non-SM $\,$

CP asymmetries or rare phenomena. While many measurements have now been published by the LHCb collaboration,

the theoretical understanding of these decays is still very limited.

Summary

Results of studies of b-baryon decays at LHCb are presented.
