IntroDucktion to Elettra

*Dedicated to Carl Barks & Don Rosa

Where is ELETTRA?

What is ELETTRA

ELETTRA is a multidisciplinary Synchrotron Light Laboratory in AREA Science Park, Trieste, Italy

- ⇒ The light is currently provided by a third generation electron storage ring, operating at 2.0 and 2.4 GeV.
- ⇒ Over 20 ultra-bright <u>light sources</u> in the range from few eV to tens of keV (wavelengths from infrared to X-rays).
- ⇒ FERMI@Elettra: new fourth generation light sources based on FEL.

Some Historical Milestones of Elettra

1980s

- ⇒ Trieste is the Italian candidate for the 5 GeV European Synchroron (assigned to Grenoble, France at the end of 1984).
- ⇒ The Italian Government decides to built in Trieste a 1.5 GeV Light Source to cover the lower part of the EM Spectrum (1985).
- ⇒ Sincrotrone Trieste is established (Nov. 1986).

1990s

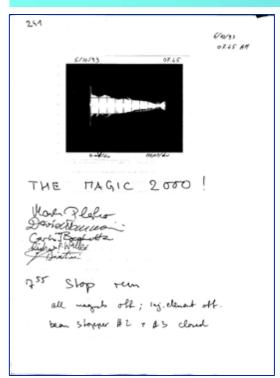

- ⇒ The civil construction works start in Basovizza (1991).
- ⇒ The machine is completed and the first beam is stored in the Storage Ring (October 1993).
- ⇒ First Beamlines become operative for users (1994).

2000s

- ⇒ The "New Full Energy Injector", based on a Booster is financed and can start the construction phase (2005).
- ⇒ The Booster is completed and the Linac is disconnected to become the injector for FERMI@Elettra (October 2007); first extraction at 2.0 Gev from Booster (Dec. 2007); first injection into the Storage Ring at 2.0 GeV (Feb. 2008)
- ⇒ March 3rd, 2008: first Run with Users using the Booster as injector.

ELETTRA's first achievements...

6/10/93 - 07.45: "The Magic 2000!"

8/10/93 - 22.45: "Beam Stored!"

...and the latest (First 2.0 GeV Injection in SR, Feb 11th, 2008) Intro Ducktion to ELETTRA Roberto Visintini

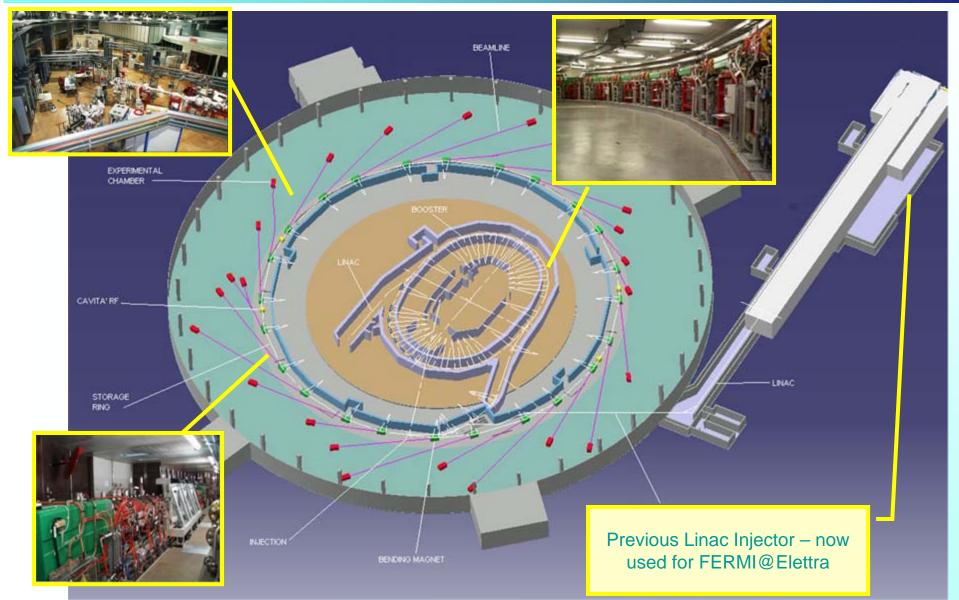

Still some "Old Guys" among the young ones (guess who...)

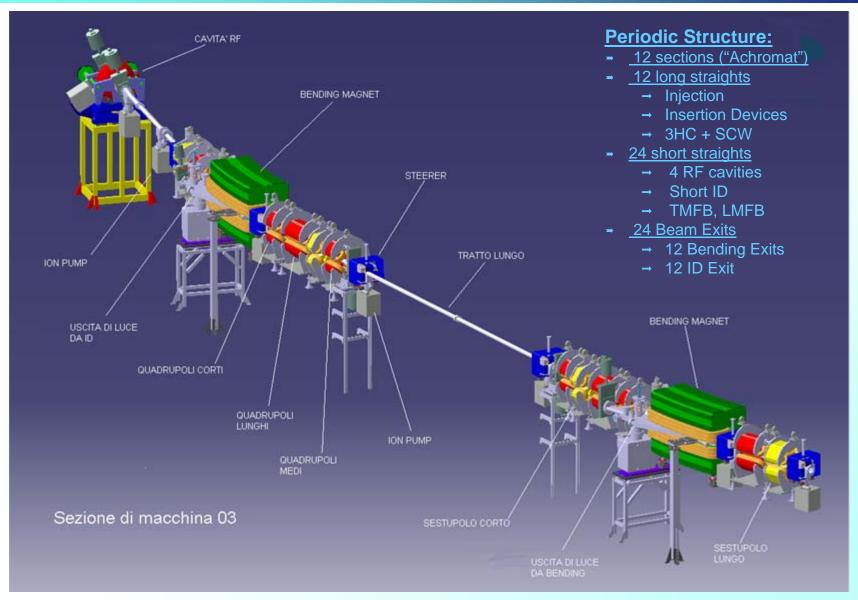

Overview of ELETTRA

The basic structure of the ELETTRA SR

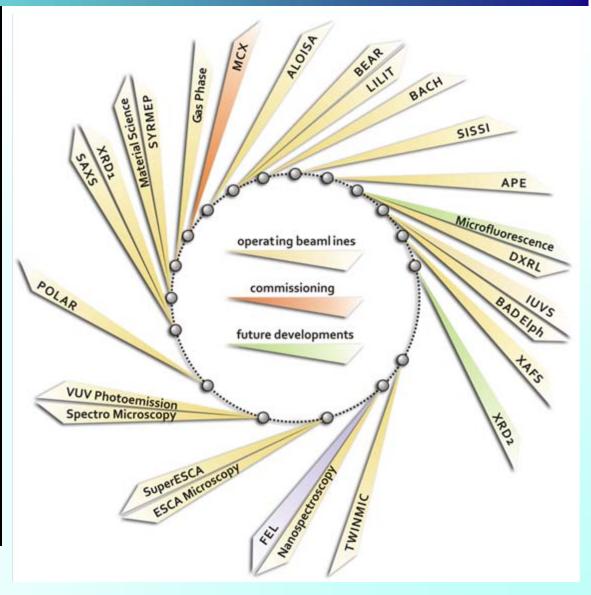

The Beamlines at ELETTRA (as April 2008)

Exit	Beamline	Source
1.1L	TWINMIC	short id
1.2L	Nanospectroscopy	id
1.2R	FEL (Free-Electron Laser)	-
2.2L	ESCA Microscopy	id
2.2R	SuperESCA	id
3.2L	Spectro Microscopy	id
3.2R	VUV Photoemission	id
4.2	Circularly Polarised Light	id
5.2L	SAXS (Small Angle X-Ray Scattering)	id
5.2R	XRD1 (X-ray Diffraction)	id
6.1L	Material science	bm
6.1R	SYRMEP (SYnchrotron Radiation for MEdical	bm
	Physics)	DIII
6.2R	Gas Phase	id
7.1	MCX (Powder Diffraction Beamline)	bm
7.2	ALOISA (Advanced Line for Overlayer, Interface and	id
	Surface Analysis)	10
8.1L	BEAR (Bending magnet for Emission Absorption	bm
	and Reflectivity)	4
8.1R	LILIT (Lab of Interdisciplinary LIThography)	bm
8.2	BACH (Beamline for Advanced DiCHroism)	id
9.1	SISSI (Source for Imaging and Spectroscopic	bm
	Studies in the Infrared)	
9.2	APE (Advanced Photoelectric-effect Experiments)	id
10.1L	X-ray microfluorescence	bm
10.1R	DXRL (Deep-etch Lithography)	bm
10.2L	IUVS (Inelastic Ultra Violet Scattering)	id
10.2R	BAD Elph	id
11.1R	XAFS (X-ray Absorption Fine Structure)	bm
11.2	XRD2 (X-ray Diffraction)	id

id = Insertion Device (undulator/wiggler)

bm = Bending Magnet

Little Ducks at Elettra...

From "Topolino" magazine #2733, April. 15th 2008: "Enlightening Science"

... and Mickey at CERN!
