Exercise 14: Activation

FLUKA Beginner's Course

Exercise 14: Activation

Aim of the exercise:

1- Description of an irradiation profile

2- Definition of cooling periods

3- Use of EMFCUT card

4- Evaluation of activity

5- Evaluation of dose equivalent

Exercise 14: Activation

❑ Start from the solution of ex5 (copy both inp and flair files):

mkdir ex14 ; cp ex5/ex5.inp ex14/ ; cp ex5/ex5.flair ex14/ex14.flair ; cd ex14

❑ Add irradiation profile:

  ❑ 3 irradiation periods of 7 days separated by 4 days of shutdown

  ❑ Intensity: 10^5 protons/second per each period

❑ Consider 2 cooling periods: 1 hour and 1 month

❑ Kill the prompt part of the electromagnetic cascade

❑ Set 10 keV production and transport thresholds for photons

❑ Set 100 keV production and transport thresholds

   for electrons and positrions

Exercise 14: Activation

For both aluminum and lead and for both cooling times:

❑ Add scoring of *specific activity* in Bq/cm^3

❑ Do both with USRBIN (unfmt 63) and with RESNUCLE (unfmtd 61 & 62)

❑ Persuade yourself the two scorings give the same results

To compare results: format the USRBIN summary file inside FLAIR

For both cooling times:

❑ Calculate the dose equivalent rate around the target

❑ Use R-Φ-Z USRBIN (unformatted unit 64): X=0 cm , Y=0 cm ,
    R: 10 cm 100 bins, Φ: 1 single bin, Z: 200 bins from -5 to 15 cm

❑ Use the conversion coefficients for *effective dose*
    (identifier 'EWT74', selected with the AUXSCORE card)

Run 5 cycles x 1000 primaries
